PREFACE

The new common-stock indexes presented herewith were constructed by the Cowles Commission for Research in Economics. Some idea of the magnitude of the project may be indicated by the fact that over 1,500,000 work-sheet entries were made, requiring 25,000 computer hours.

Special assistance was rendered by three members of the Commission staff, the late William F. C. Nelson in planning the project, Francis McIntyre in drafting an algebraic formulation of the method employed, and Dickson H. Leavens in seeing the publication through the press. An active part in the development of the project was taken by Harold T. Davis of Northwestern University and the Cowles Commission, Ragnar Frisch of the University of Norway, research consultant of the Cowles Commission, and Charles F. Roos of the Institute of Applied Econometrics, formerly research director of the Cowles Commission. For helpful suggestions we are indebted to Irving Fisher of Yale University, Herbert E. Jones of the Cowles Commission, and Gerhard Tintner of Iowa State College, formerly a research fellow of the Cowles Commission.

The work of computation was directly in charge of Forrest Danson of the Cowles Commission, assisted by Martha Belschner, instructor in statistics at Colorado College. Staff members of the Commission who worked on the indexes were Mary Jo Lawley, Anne M. Lescisin, Emma Manning, Vera Manning, and Kathryn Withers. Students at Colorado College who aided in the computing were Edith Mae Adamson, Frances Allen, Hester Jane Butcher, Doris Caldwell, Ann Coleman, Harriet Engle, Roberta Griffin, Cenovia Gonzales, Luella Hall, Charlotte Hansman, Margaret Hansman, Elizabeth Harrington, Eleanor Hastings, Mildred Hinkle, June Rose Middlesworth, Pauline Nelson, Isabel Pedersen, Charlotte Pendergrast, Evalyn Pick, Violet Powell, Rosalie Spiller, Leah Standish, Mary Volgin, Martha Winston, Helen Margaret Wood, James Arnold, Charles Axtell, Caswell Beck, William Brooks, Gordon Bugg, Carroll Bullock, Alton Christenson, Tom Ben Dillingham, Ancel Gates, Bernard Goldhammer, Arthur Gore, Donald Howard, Rudolph Lusic, Charles McLellan, Herbert Newhall, Louis Schoen, Tynan Smith, Harold Tanner, William Tudor, and Cecil Wright.

In order to avoid unnecessary duplication of labor, some of the indexes computed by the Cowles Commission have been supplemented

for certain portions of the period with comparable indexes constructed by other organizations. We are indebted to the National Bureau of Economic Research for permission to include, from 1871 to 1917, a portion of Frederick R. Macaulay's index of railroad stock prices. The Standard Statistics Company of New York has generously allowed the use of the monthly averages of its weekly stock price indexes from 1918 to 1937.

Great care has been taken to devise and carry out appropriate checks to secure accuracy, but it is too much to hope that in a work of this character and magnitude no computational and typographical errors have occurred. We should appreciate being notified of any which may be discovered.

PREFACE TO SECOND EDITION

In the second edition the opportunity has been taken to correct such errors as have been discovered and to bring the indexes down through 1938.

COMMON-STOCK INDEXES

INTRODUCTION*

1. *The Importance of Common Stocks*

The movements of common-stock prices, earnings, and yields are of no small importance to the national economy. As a rough approximation it may be stated that, at least in 1929, about 18 per cent of the national income in the United States represented a return on investment.¹ For that year, classifying return on investment into dividends, interest, and net rents and royalties, the National Industrial Conference Board estimates² that dividends exceeded by more than 50 per cent the total of interest and net rents and royalties combined. In view of the fact that dividend payments were relatively high in 1929 it would probably be conservative to state that cash dividends from common stocks normally equal about 9 per cent of the national income.

In the case of 8,079 estates of resident decedents in the United States for which returns were filed in 1928, about 43 per cent of the value of all property reported was represented by capital stock.³ By a curious coincidence, the authors of this estimate also conclude⁴ that the same 43 per cent measured the proportion of total investment opportunity which in 1922, the only year for which they made an estimate, was represented by corporate securities. Presumably the figure for 1922, but not that for 1928, included corporation bonds.

Tabulations of the number of stockholders in the United States are only approximate, but a painstaking estimate, that of the Twentieth Century Fund,⁵ placed the number between 10 and 12 million in 1932. This indicates that, as a maximum, the number of stockholders may be close to 10 per cent of the population. In any event, the number of individuals participating in the ownership of American corporations is very large.

The importance of the security markets to corporations depends

* The descriptions which follow are in part nontechnical and in part somewhat mathematical in nature. The reader who is not interested in the various algebraic formulations is advised to omit Sections 5 to 8.

COMMON-STOCK INDEXES

in large measure upon the extent to which they finance their operations in these markets. The experience of recent years has indicated that in favorable periods corporations are coming more and more to rely upon the issue of common stocks, and less and less upon the floating of long-term bonds, as a source of increased capital. Of course, the greater this reliance upon common stocks, the more important to the national economy become the markets in which they are traded, but there is another and perhaps greater significance which attaches to this trend toward common-stock financing. A large and growing body of economists is now maintaining that the inflexibility of certain expenses of production serves to aggravate depressions. They believe that, if costs could be reduced as consumer purchasing power declines, the volume of physical production could be made more stable and the average real income of the nation thus increased through eliminating the demoralizing effect of violent fluctuations. One of the most inflexible of costs is bond interest, and the disorganization of production consequent upon the failure fully to earn such interest, with resultant bankruptcy proceedings, frequently constitutes a serious loss to the community. It seems obvious that the greater the proportion of corporate liability on equity account, and the smaller the proportion of debt, the better able will be the enterprise to weather an economic depression.

2. Cowles Commission Indexes

The purpose of the Cowles Commission common-stock indexes is to portray the average experience of those investing in this class of security in the United States from 1871 to 1938. The indexes of stock prices are intended to represent, ignoring the elements of brokerage charges and taxes, what would have happened to an investor's funds if he had bought at the beginning of 1871 all stocks quoted on the New York Stock Exchange, allocating his purchases among the individual issues in proportion to their total monetary value, and each month up to 1938 had by the same criterion redistributed his holdings among all quoted stocks.⁶ During this 68-year period there were, of course, certain common-stock investors who were considerably more successful than others. However, if all the profits and losses could have been tabulated, the total result would have approximated that shown by the indexes in question, except that deductions would have to be made for brokerage and taxes, important items to the trader but less important to the long-range investor.

⁶ See description of data employed, pages 5-11.

COWLES COMMISSION INDEXES

The indexes represent separately each of 59 groups, classified according to industry, as well as 10 combinations of these groups. For each of these 69 groups have been computed 7 different series, a total of 483 indexes. A complete explanation of the formula for each series will be found on pages 11-16. A brief description follows:

Series P. Stock Prices. These indexes are presented monthly and are "spliced" to monthly averages of the weekly Standard Statistics indexes, which begin in 1918 or later, with 1926 = 100, so that the figures currently published by the latter organization may be used without adjustment in bringing up to date the various indexes in this series. The price relative for each issue in an index receives a weight equal to the product of the price per share by the number of shares outstanding. All necessary adjustments have been made for changes in the number of shares outstanding; see Section 6.

Series C. Stock Prices including Cash Dividends. This series is exactly like Series P except that adjustments have been made throughout to represent the effect if an investor, upon receipt of each cash dividend, had reinvested it in the issues composing each group index which included the stock of the company concerned.

Series Y. Yield Expectations. This is a monthly series in which the prevailing annual dividend rate, multiplied by the number of shares outstanding, is shown as a percentage of total stock values.

Series Y_a. Yields. This is an annual series in which the total dividend actually paid is expressed as a percentage of the average value of stock outstanding.

Series D_a. Dividend Payments. This is an annual measure of actual investor income, obtained by multiplying the corresponding Series Y_a index number by the average price per share (from Series P) during the year in question.

Series R. Earnings-Price Ratios. This series consists of annual indexes in which total earnings for any given year are expressed as a percentage of the average value of stock outstanding in that year.

Series E. Earnings. This series presents annual indexes of corporate earnings. Any given index number in Series E is the product of the corresponding index number for Series R and the average of Series P for that same year. For the earlier years, in which earnings records were not available on all quoted issues, annual price indexes were constructed, using only stocks in the earnings indexes. These indexes are designated P_{Ea} and are presented in Appendix III. For comparability with Series R, yield indexes based only on stocks in the earnings indexes were also obtained. Designated Y_{Ea}, these are presented in Appendix IV.

COMMON-STOCK INDEXES

3. Period Covered

On the evidence of an extensive survey[†] it was decided not to extend the Cowles Commission indexes back of 1871 because of the scarcity of data prior to that time. A detailed analysis of the price quotations on industrial and public utility stocks available during the 10 years from 1861 to 1870 is given in Table 1. Only 52 of these stocks are quoted on the New York Stock Exchange at any time during this period, and the largest number in any one year (1866) is 38. Of these 38, however, there are only 8 for which quotations are available in each month of the year. In the 4 years prior to 1865 not more than 9 industrials and 1 utility are quoted in any given year. While the number of issues for which quotations are available every month is about the same for the period from 1865 to 1870 as for a few years immediately following 1870, information as to capital structure, earn-

Column (A) indicates number of companies for which quotations are available for every month of the year.

Column (B) indicates number of companies for which quotations are available but not for every month of the year.

Industrial and utility stocks included in the above tabulation as quoted at some time during the period 1861-1870 are: American Coal, Ashburton Coal, Butler Coal, Cameron Coal, Consolidated Coal, Cumberland Coal, Cumberland Coal and Iron, Central Coal, Lehigh and Susquehanna Coal, Maryland Anthracite Coal, Pennsylvania Coal, Schuylkill Coal, Spring Mountain Coal, Spruce Hill Coal, United States Coal, Wolf Creek Coal, Wilkesbarre Coal, Wyoming Valley Coal, Maryland Coal, American Gold, Copake Iron, Mariposa Mining, New York Gold, Quartz Hill Gold, Minnesota Copper, Quicksilver Mining, Rutland Marble, Smith and Parmalee Gold, Atlantic Mail Steamship, Pacific Mail Steamship, Union Navigation, South American Navigation, Adams Express, American Express, American Merchants Express, Merchants Union Express, United States Express, Wells-Fargo Express, Brunswick City Land, Building Material, Canton Land, Cary Improvement, Central American Transit, New York Guano, Boston Water Power, Citizens Gas Shares, Harlem Gas, Manhattan Gas, New York Gas, Western Union Telegraph, Delaware and Hudson Canal, U. S. Transportation.

[†] This survey included such sources of information as the *Commercial and Financial Chronicle*, *Stock Exchange Manual* by Henry Hamon, *Stockholder, Banker's Magazine*, *Hunt's Merchants Magazine*, *New York Journal of Commerce*, *New York Herald*, *New York Times*, and *New York Tribune*.

DATA EMPLOYED

ings, and dividends of industrial and utility stocks is practically non-existent prior to 1871.

Further, from an examination of Chart 2, page 54, it will be seen that the value of stocks available for inclusion in the indexes in 1871 equalled only about 2 per cent of the national wealth existing at that time,⁸ whereas the stocks included during the 11 years from 1928 to 1938 represented approximately 12 per cent of the national wealth during that period. If the indexes had been extended back to 1861 the stocks available for inclusion in that year would have constituted only about 0.7 of 1 per cent of the national wealth then existing. Prior to 1871 the All Stock index would have been almost completely dominated by one group, the railroads, and would have constituted such a very small fraction of the national wealth that its economic significance would not have been at all comparable with that of later years.

4. Data Employed

The data employed in the construction of these indexes include, from 1871 to 1917, all industrial and public utility common stocks, and about 93 per cent in market value of the railroad stocks, traded on the New York Stock Exchange. The stocks and the periods of their inclusion are listed in Appendix II. The indexes in which these groups are combined include approximately 97 per cent of the market value of all stocks quoted. The railroad stocks for this period are those which compose Frederick R. Macaulay's index,⁹ a portion of which is incorporated in the Cowles Commission indexes, Series P, by kind permission of the National Bureau of Economic Research. A survey showed that, while the stocks included in Macaulay's index are only slightly over 80 per cent in market value of all railroad stocks listed on the New York Stock Exchange, nevertheless they represent 93 per cent of the latter, since the railroads included in the index controlled, by lease or otherwise, about 68 per cent of all the stock of railroads listed on the New York Stock Exchange but not so included.

⁸ These comparisons are based on reports of the national wealth made by the United States Bureau of the Census and, subsequent to 1912, by the National Industrial Conference Board; see *Statistical Abstract of the United States, 1936*, p. 272, and *Standard Trade and Securities*, Vol. 80, No. 29, Section 4, June 5, 1936, p. D-64. It is realized that estimates of the national wealth are necessarily rough guesses, but these figures are supported by Professor Willford I. King's estimates of the national income, and are thought to be sufficiently accurate for the use to which they are here put.

⁹ Frederick R. Macaulay, *Some Theoretical Problems Suggested by the Movements of Interest Rates, Bond Yields, and Stock Prices in the United States Since 1856*, New York, National Bureau of Economic Research, 1938, Index No. 6, Table 10, pp. A141-A161. As used in the Cowles Commission indexes, Macaulay's index has been adjusted to coincide with that of the Standard Statistics index in January, 1918.

COMMON-STOCK INDEXES

Subsequent to 1917 (in some cases 1926 or later) are used the stocks included in the Standard Statistics weekly indexes which represent in market value 90 per cent of all common shares listed on the New York Stock Exchange. A survey, covering the years 1926, 1930, and 1936, showed that approximately 6 per cent of the total market value of stocks so listed afforded incomplete monthly quotations. From this it follows that, from 1918 to 1938, the indexes include about 96 per cent of the market value of stocks listed on the New York Stock Exchange which are sufficiently active for sales to be recorded regularly. Subsequent to 1925, important stocks traded on the New York Curb and a few from other exchanges are included. Sources of data are, in general, the *Commercial and Financial Chronicle*, *Poor's* and *Moody's Manuals*, and the Standard Statistics Company publications.

In the years 1929-33 the New York Stock Exchange accounted for about 67 per cent of the total volume of stock transactions on the 24 most important exchanges in this country. More than half of the remaining volume was on the New York Curb Exchange.¹⁰ The reason for excluding all Curb quotations from the indexes for the earlier years is indicated by the following statement regularly carried by the *Commercial and Financial Chronicle* at the head of the Curb quotations prior to December 11, 1920:

It should be understood that no such reliability attaches to transactions on the "Curb" as to those on the regularly organized stock exchanges.

On the New York Stock Exchange, for instance, only members of the Exchange can engage in business, and they are permitted to deal only in securities regularly listed—that is, in securities where the companies responsible for them have complied with certain stringent requirements before being admitted to dealings. Every precaution, too, is taken to insure that quotations coming over the "tape," or reported in the official list at the end of the day, are authentic.

On the "Curb," on the other hand, there are no restrictions whatever. Any security may be dealt in and anyone can meet there and make prices and have them included in the lists of those who make it a business to furnish daily records of the transactions. The possibility that fictitious transactions may creep in, or even that dealings in spurious securities may be included, should, hence, always be kept in mind, particularly as regards mining shares. In the circumstances, it is out of the question for anyone to vouch for the absolute trustworthiness of the record of "Curb" transactions, and we give it for what it may be worth.

Frauds practiced on the New York Curb were so severely criticized in the report of the Hughes Commission in 1909 that organization was begun for the purpose of reform. It was not, however, until 1921, when the activities of the Curb were moved indoors, that it was possible to exercise the necessary control.

¹⁰ *The Security Markets*, Twentieth Century Fund, 1935, Appendix IX, p. 748.

DATA EMPLOYED

On the basis of a rough approximation it was estimated that the stocks included in the Standard Statistics indexes have in recent years been about 73 per cent of the market value of common stocks listed on all of the exchanges in the United States, and about 77 per cent of those which are sufficiently active to be regularly available for inclusion in an index. This approximation was arrived at by using figures from the Twentieth Century Fund report of shares traded on the various exchanges as representative of the relative numbers of shares listed, and by assuming that the ratio of inactive shares to all listed shares was the same for other exchanges as for the New York Stock Exchange, a survey having been made to determine the latter figure. These assumptions probably overstate the importance of stocks active on other exchanges, but not listed on the New York Stock Exchange, since in certain cases stocks are listed elsewhere, as well as in New York, and form a substantial part of the trading on the outside exchanges. In the Cowles Commission-Standard Statistics indexes, since the weights are based on numbers of shares outstanding, rather than numbers of shares traded, it is not proper that a stock should appear twice in an index when quoted on two different exchanges. The proportion of inactive stocks on the other exchanges, not including stocks also listed in New York, is probably greater than the proportion of inactive stocks on the New York Stock Exchange.

In the case of certain indexes, particularly the Railroad, Public Utility, Industrial, and All Stock, a question arose with regard to the duplication of weights. For example, 25 per cent of General Motors stock is owned by du Pont. This 25 per cent appears in the Automobile index and also, since its action substantially affects the value of du Pont, it influences the index of Chemical stocks. When these two groups are combined with others into the Industrial and All Stock indexes, the result is that the General Motors stock owned by du Pont is counted twice. To determine the seriousness of this problem a survey was made as of December, 1936, to discover the extent to which corporations held stocks of other corporations included in the same index. In the case of 41 per cent of the market value of the Industrial index, stocks so held amounted to 7.4 per cent of the sample examined. If these duplications had been eliminated, the effect would have been to raise the index by 0.6 of one per cent in the five years from December, 1931 to December, 1936. An examination of 73.6 per cent of the market value of the Railroad index showed duplications amounting to 6.0 per cent of this amount and elimination of these would have lowered the index by 0.9 of one per cent in the five-year period covered. For the Public Utility index, the group most seriously

COMMON-STOCK INDEXES

involved because of the holding companies, 46.7 per cent of its market value, including all the holding companies, showed duplications amounting to 17.2 per cent of this amount and elimination of these duplications for the five years would have raised the index by only 0.2 of one per cent. Finally, in the case of the All Stock index, an examination of 44 per cent of the market value disclosed the existence of duplications equalling 8.9 per cent of this amount and elimination of these would have raised the index by 1.2 per cent in the five years considered. The corporations included in the survey were the larger ones most likely to have substantial holdings of other stocks included in the same index. It therefore seems improbable that the effects of duplication noted would have increased substantially if the survey had been extended to include all stocks in the indexes. Since, furthermore, there is no evidence of bias in the action of the duplicated stocks, it seems safe to conclude that elimination of these would have had a negligible effect on the indexes.

The objection may be raised that, if the movements of the Cowles Commission indexes are determined by the action of changing groups of quoted stocks, there is no assurance that such indexes accurately represent the changes in prices of all stocks, including those which temporarily or permanently drop out, or which were never included.

To meet this possible objection a survey was made covering the entire period from 1871 to 1938. In these 68 years there were 518 cases in which stocks had to be dropped temporarily from the indexes because they disappeared from the quotations, and later reappeared. Each of these cases was analyzed as follows: the last month in which an issue was quoted, before its temporary disappearance, was called month 1, and the first month in which it reappeared was called month 2. Two index numbers were computed for month 2, each with month 1 as a base. The first, which we may call D , was computed excluding the disappearing stock; the second, D' , was computed including the issue in question. The ratio $N (=D'/D)$ will indicate by its deviation from unity the extent to which the missing stock would have altered the index for month 2 had it been included in the actual index computations. N was computed for each of the 518 cases in the All Stock index. There were 310 cases in which N was less than 1 and 208 cases in which N was greater than 1, but in all except 31 cases N deviated so slightly from 1 that the correction could have no effect on the index. Of these 31 instances, N was less than 1 in 14, and N was greater than 1 in 17. Cumulating the 518 corrections for temporarily disappearing stocks would have had the effect of raising the All Stock index by 1.46 per cent in 68 years. At no point in this

DATA EMPLOYED

period would the cumulative effect of the corrections have made a difference of more than 2.07 per cent.

In addition to the temporarily disappearing stocks there were, from 1871 to 1938, a total of 509 stocks which permanently dropped from the indexes. Among these the identity of 128 corporations was lost through merger, reorganization, or distribution of assets; quotations on 48 stocks became too infrequent to permit further inclusion; information in the case of 7 corporations became insufficient on capital structure, dividend records, etc.; 20 stocks were dropped for miscellaneous reasons such as leasing of property, split-ups into smaller companies, change of industrial classification, removal from the New York Stock Exchange, etc.; 24 stocks were dropped from Macaulay's Railroad index before 1918 and 150 stocks were dropped by Standard Statistics between 1918 and 1938, because their relative importance had declined substantially; 98 stocks were dropped in 1918 or later from the Cowles Commission indexes and Macaulay's Railroad index, because they were not continued by Standard Statistics; 34 stocks disappeared from quotations, either because of receivership or with no information available as to the reason.

Of the 509 stocks classified above there were 456 for which definite values could be determined subsequent to their removal from the indexes. For 175 of these the effect on the All Stock index was measured in the same way as for the temporarily disappearing stocks. The result of correcting for the effect of these would have been to raise the index by 3.56 per cent. In the case of the remaining 281 stocks which were permanently dropped from the indexes, full information and continuous quotations were available subsequent to their removal. These were classed in the same category as stocks which had never appeared in the index and which were disposed of by the following investigation. This covered 73 railroad stocks which were quoted on the New York Stock Exchange for at least 5 years during the period from 1871 to 1917 but were neither included in Macaulay's index nor leased nor owned by corporations which were included. These 73 stocks omitted from the index were divided into 2 groups, one representing the larger, and one the smaller, companies. The price action in the case of each of these stocks was compared for a period of 5 years or longer with the movement of the Railroad stock price index. In the group of larger companies, 23 advanced more, and 14 less, than the index. Of the smaller companies, 11 advanced more, and 25 less, than the index. These results thus indicated that inclusion of the stocks omitted from the index during the period from 1871 to 1917 could have had no other effect on the trend than that of increas-

COMMON-STOCK INDEXES

ing the slope to a negligible extent. For the period from 1918 to 1938 several hundred stocks of small companies quoted on the New York Stock Exchange were not included in the indexes. There were also many stocks listed on other exchanges which were not included, the market value of all stocks omitted from the indexes during this period being about 27 per cent of the total, as indicated by the estimate on page 7 that 73 per cent of total value was included. A random sample of 200 of the omitted stocks listed on the New York Stock Exchange was analyzed. Of these, 92 were stronger and 108 weaker than the average of the stocks included in the indexes and a division of the stocks into 2 groups of 100 on the basis of size failed to disclose any significant difference between these groups.

There were also 53 stocks which became valueless or for which information was unobtainable subsequent to their disappearance from the quotations. While it seems likely that in at least a few of these cases stockholders realized something from their holdings, it was thought best to put down all of these 53 stocks as a total loss to the investor.

In the case of the All Stock index, the 53 stocks just referred to, if considered as a total loss, would have lowered the index by 2.48 per cent. On the other hand, the 456 stocks which permanently dropped out, but for which a later evaluation could be made, would not have had the effect of lowering the index. As already noted, corrections for the 518 cases of temporary disappearance would have raised the index by 1.46 per cent. The conclusion is therefore established that omissions and discontinuities in the list of included stocks are negligible in their effect on the All Stock index.

In the case of various subgroups, however, the effect of disappearances is magnified. A complete analysis of this effect, for the Cowles Commission indexes and those with which they are here compared, is beyond the scope of this volume. It is hoped that such an analysis can be made for presentation in a forthcoming study of the action of stock prices.

No attempt has been made to correct the Cowles Commission indexes for the price action of these disappearing issues, because any such corrections would have involved unverifiable assumptions such as that the deviations from a linear trend in the case of a temporarily disappearing stock, during the period of its disappearance, approximated those of the index, or that a permanently disappearing stock, concerning which no subsequent information could be secured, became a total loss in the month following its last appearance in the quotations.

SELECTION OF THE INDEX-NUMBER FORMULAS

The investigations reported in this section demonstrate that the indexes satisfactorily represent all common stocks in the United States for which authentic and adequate information is available.

5. Selection of the Index-Number Formulas

In choosing a formula for the computation of the Cowles Commission indexes which make up Series P and C, most of the standard index-number formulas were considered. Irving Fisher concludes¹¹ that the "ideal" price index is given by

$$(1) \quad I_i = \sqrt{\frac{\sum p_i q_0}{\sum p_0 q_0} \frac{\sum p_i q_i}{\sum p_0 q_i}}$$

In this case p_i is the price and q_i the quantity in month i , p_0 and q_0 are the price and quantity in the base month 0, and Σ indicates that summation is taken over all commodities included in the index. Now if $q_i = q_0$, clearly (1) reduces to

$$(2) \quad I_i = \frac{\sum p_i q_0}{\sum p_0 q_0}$$

Formula (2), which Fisher reports¹² was first proposed by Laspeyres in 1864, is used in many important index numbers regardless of whether $q_i = q_0$. According to Fisher¹³ these include in this country the United States Bureau of Labor Statistics index of wholesale commodity prices, Dun's index of wholesale commodity prices, *Federal Reserve Bulletin* index of wholesale commodity prices, Bureau of Labor Statistics index of retail commodity prices, National Industrial Conference Board cost-of-living index, *Federal Reserve Bulletin* indexes of agricultural-commodity, mineral, and manufactured-commodity prices. For other countries indexes employing this formula include Knibbs' index of Australian wholesale commodity prices, *Canadian Labour Gazette* index of wholesale commodity prices, Statistique Générale de la France index of French retail commodity prices, *Finanzpolitische Korrespondenz* index of minimum cost of living in Berlin, *Labour Gazette* index of cost of living for Great Britain, *Monthly Abstract of Statistics* index of wholesale commodity prices for New Zealand, *Statistiske Meddelelser, Det Statistiske Centralbyrå* cost-of-living index for Norway, *Quarterly Abstract of Union Statistics* wholesale commodity price index for South Africa, and *Göteborgs*

¹² *Ibid.*, p. 59.

¹³ *Ibid.*, Appendix I, pp. 433-438.

COMMON-STOCK INDEXES

Handels- och Sjöfartstidning wholesale commodity price index for Sweden.

Formula (2) may be regarded as an aggregative formula in which given-year prices, in the numerator, and base-year prices, in the denominator, are weighted by base-year quantities before summation; or it may be considered an arithmetic average of price relatives weighted by base-year *values*, since

$$\frac{\sum p_i q_0}{\sum p_0 q_0} = \frac{\sum p_0 q_0 \frac{p_i}{p_0}}{\sum p_0 q_0}.$$

It is of course possible, by modifying formula (2) slightly, to employ it under the "chain base" system. If we put

$$I'_i = \frac{\sum p_i q_{i-1}}{\sum p_{i-1} q_{i-1}},$$

then the index number for month i may be expressed:

$$(3) \quad I_i = I'_1 \cdot I'_2 \cdots I'_i = \prod \frac{\sum p_i q_{i-1}}{\sum p_{i-1} q_{i-1}},$$

where the operator Π indicates product cumulation, that is,

$$\Pi I'_i = I'_1 I'_2 \cdots I'_i.$$

In commodity price indexes, where the q 's are the quantities of the various commodities sold during a given unit of time, the difficulty of promptly securing data on quantities precludes the use of the chain-base system in an index number which is published frequently and must be kept up to date. Further, there are many commodities such as annual crops for which it would be very difficult, if not impossible, to determine significant monthly quantities. In the case of common stocks, however, if the q 's be taken as the number of shares outstanding, they are readily determined and subject to relatively infrequent variation. Therefore, a chain-base system has been employed in the computation of the Cowles Commission stock price indexes. This has the advantage that the list of stocks included in an index may be changed from month to month without the necessity of applying a correction factor, thus readily permitting the inclusion of any stock quoted for 2 or more consecutive months.

Of course Fisher's "ideal" formula (1) may also be used in a chain-base system, and the question may arise whether it should have been employed in the Cowles Commission indexes. It takes account of the effect of change in the relative importance of a stock in

SELECTION OF THE INDEX-NUMBER FORMULAS

an index, arising from the sale of additional stock or the issue of rights, for the month in which such a change occurs, whereas a simpler formula such as (3) does not take such effect into account until the month following. On pages 31 to 32 is described an empirical test which indicates that the extremely small differences resulting from the use of Fisher's "ideal" formula would not justify undertaking the additional labor of computation involved.

If there is no change in the quantity of stock outstanding, then

$$I'_i = \frac{\sum p_i q_i}{\sum p_{i-1} q_{i-1}},$$

and formula (3) may be written:

$$(4) \quad I_i = \prod \frac{\sum p_i q_i}{\sum p_{i-1} q_{i-1}},$$

which is simply the total value of all stock outstanding in each month i divided by the total value of the stock outstanding in the previous month, these ratios being chained by product cumulation. These "value ratios" are most important in the construction of stock price indexes, such as those of the Cowles Commission, designed to portray the experience of the hypothetical investor described on page 2. In the absence of *pecuniary* changes in the investor's position, initiated by the corporation whose securities he holds, it is these value ratios which express his position. Formula (4) gives the ratio which the value of his holdings in month i bears to the value of his holdings in the base month. Of course, if the same stocks are held, then:

$$(4.1) \quad I_i = \frac{\sum p_i q_i}{\sum p_0 q_0}.$$

Apart from the corrections for the *pecuniary* changes referred to, (4) is the stock price index employed by the Cowles Commission. The simplification (4.1) is seldom realized because no comprehensive long-term index can be constructed if only those stocks which survive the entire period are to be included. When a stock makes its last appearance in month $i-1$, the numerator of I'_{i-1} will contain the value of that issue in month $i-1$, but the denominator of I'_i will not include this or any other value (except zero) for the issue in question. Thus (4) will not, in general, reduce to (4.1).

What then are these *pecuniary* changes, initiated by the corporations whose securities the investor holds, which invalidate the value ratio as a measure of his investment experience? They are: (a) the sale by the corporation of its own stock for cash or other assets, (b) the issuance of rights to purchase the stock of the corporation at a

COMMON-STOCK INDEXES

price less than market, and (c) the payment of dividends in cash, or any assets other than the common stock of the issuing corporation. Each of these activities changes the *cash* position of the investor relative to the financial success of the corporation, and the value ratio must be modified each time any of these changes occurs.

The sale by the corporation of its own stock for cash or other assets alters the investor's position because it increases the size and presumably the earning power of the corporation while decreasing his proportionate share in the success of the enterprise. Under such conditions there will be an increase in the money value of total stock outstanding which is entirely unaccompanied by any improvement in the value of his holdings or in his expectation of dividends.

The issuance of rights to purchase previously unissued stock of the corporation at a price less than the calculated ex-rights level¹⁴ alters the investor's position in that he is compelled by such action on the part of the corporation to sell all, or a part of, the rights he has received as a stockholder, retaining a decreased proportionate claim against the dividends of the company; or he must buy all the shares to which his rights entitle him in order to maintain his proportionate claim against the corporate distributions.

Obviously the payment of a dividend in cash, or in any assets other than the common stock of the issuing corporation, affects the cash position of the recipient. The effect upon his investment experience depends upon what he does with the dividend, and this is generally unknown and unpredictable. Two assumptions have been made in the Cowles Commission indexes. Series P indexes are calculated ignoring such dividends completely. This assumes that the yield is a constant fraction in the case of each stock and therefore may be omitted from the calculations. While this is the usual procedure in well-known stock price indexes, it seems less realistic than allowing for the actual dividend payments, as is done in the Series C indexes, by assuming that all dividends in cash or its equivalent are immediately reinvested in the common stocks of the groups of companies from which they come, the value ratios being adjusted to allow for the increased holdings which our hypothetical investor acquires.¹⁵ Certain-

¹⁴ This calculation is explained on page 21.

¹⁵ Of course, if our hypothetical investor held *all* the outstanding stock of the various companies, such reinvestment would be impossible, and it is clear that, if *every* investor tried to purchase with his cash dividends stock of these concerns, each would find himself with exactly the same number of shares as before. But our hypothetical investor was assumed merely to distribute his holdings in *proportion* to the value of stock outstanding and, as long as we do not suppose him to be "average" in the sense that all investors might have behaved just as he did, with the same results, the correction for cash dividends seems appropriate.

SELECTION OF THE INDEX-NUMBER FORMULAS

ly if a person bought one share of Company A for \$100 and one share of Company B for \$100, both purchases being made in January, 1871, and held them until January, 1937, when both were sold for \$100 each, and if through all the intervening years Company A distributed a \$4.00 annual dividend and Company B paid no dividend whatever, the investment experiences in the two stocks would be vastly different. Yet, unless effect were given to the cash dividend payments, the records of these two companies would be indistinguishable in the price indexes. Incidentally, it should be noted that the indexes in Series C, in giving effect to dividend payments, thereby largely eliminate the seasonal variation resulting from the tendency for ex-dividend dates to cluster in December, March, June, and September.

Unlike the pecuniary changes which have been considered, stock dividends and stock splits do not alter the investor's position in the slightest. He may find himself with twice as many shares of stock, each worth just half as much as before, or three times as many shares, each selling for a third of its former price; but the market value of his holdings, and the proportionate claim he holds against the corporate earnings, are not affected. It is logical, then, that no correction for the payment of a stock dividend should be applied to indexes Series P and C, and that an index-number formula should be selected which does not require such correction. Clearly the value ratio meets this test. There are certain occurrences discussed elsewhere in the text which necessitate correction of the value ratio, but mere multiplication of the number of shares, accompanied by proportionate decrease in the market price per share, can have no effect upon it.

The basic formula for the various yield indexes, Y , Y_a , and Y_{Ea} , may be expressed, in symbols applicable to all three types, as follows:

$$(5) \quad Y = \frac{\Sigma dq}{\Sigma pq}.$$

For Series Y, yield expectations, the left member of (5) is the expected annual income (estimated as of each month) per dollar of security value, d is to be taken as the annual cash dividend rate per share obtaining during the month in question, and p and q are the prevailing price and quantity of stock outstanding. For this series, d is computed as four times the quarterly rate last declared, unless the corporation announces that a change in rate is to be made, or a so-called extra dividend forms a regular feature of the company's dividend policy, in which cases the last declared rate is adjusted accordingly. When an extra dividend is paid irregularly, it is allocated only among the months to which the payment is assumed to pertain.

COMMON-STOCK INDEXES

For Series Y_a , actual yields, the left member of (5) is the annual income per dollar of security value, based on actual dividends paid, and the average value of stock outstanding during the year. Thus d represents the number of dollars actually paid per share of stock, rather than the rate obtaining in any particular month, and q is the average number of shares outstanding, computed so as to make dq equal the total actual dividend disbursement, while Σpq is the average of the twelve monthly values of stock outstanding.

The definitions of symbols applicable to Series Y_a also apply to Series Y_{Ea} , except that the former is based on the complete list of stocks in the price indexes, whereas the latter is based only on the issues for which earnings records are available.

Series D_a , consisting of annual indexes of actual dividend payments, employs the following formula: Where P_a is the annual average of the group index of stock prices, Y_a is the actual group yield, and D_a is the group index of dividend payments, then

$$(6) \quad D_a = Y_a P_a.$$

Thus the index of dividend payments represents for any given year the rate of income in dollars which would have been derived from an investment in dollars equivalent to the figure representing the average of the price index. The several group indexes make possible a comparison of the fluctuations of income from investment in various groups of securities.

The annual indexes of earnings (Series E), and of earnings-price ratios (Series R), may be expressed as follows: Where e is the amount of annual earnings per share, q and Σpq are respectively the quantity and average value of stock outstanding (as before), and P_{Ea} the annual group price index of stocks for which earnings reports are available, we define

$$(7) \quad R = \frac{\Sigma eq}{\Sigma pq}$$

and

$$(8) \quad E = R P_{Ea}.$$

In the tables, Y , Y_a , Y_{Ea} , and R are expressed as percentages, that is, their formula values are multiplied by 100. In comparing earnings-price ratio with yield, R is to be considered in connection with Y_{Ea} , since both are based on the same list of stocks. For an index of dividend payments comparable with earnings index E, it would be necessary to compute D_{Ea} , which would be given by $Y_{Ea} P_{Ea}$. Series Y_{Ea} is given in Appendix IV, and P_{Ea} in Appendix III.

CONSTRUCTION OF THE STOCK PRICE INDEXES

6. Construction of the Stock Price Indexes

The principal operations entering into the construction of the Cowles Commission stock price indexes include adjustments to arrive at the "average price per share," and corrections to the index-number formula, necessitated by changes in capital structure or the distribution of assets. To explain these steps in detail the following definitions are needed:

Let p_i be the "average price per share" during month i , as defined below,

p_i'' be the highest price observed during month i ,

p_i' be the lowest price observed during month i ,

q_i be the number of shares outstanding at the end of the month i ,

$k_i (= \frac{q_i}{q_{i-1}})$ be the ratio of the number of shares outstanding at the end of month i to the number outstanding at the beginning of month i (this ratio will be different from unity only on the occasions when the corporation sells new stock or issues stock dividends or rights),

$p_{r,i}$ be the price per share at which new shares are offered to stockholders under the terms of rights,

d_i be the cash dividend per share paid to stockholders of record during the month i ,

r_i be the value of a right issued to stockholders of record in month i , to purchase $k_i - 1$ additional shares.

c_i be the correction necessitated by a change in capital structure or distribution of assets.

The calculation of the stock price index for any month according to formula (4) requires the determination of a price p and a quantity q for each stock in the index. When q is taken as the number of shares of stock outstanding at the end of the month in question, it is relatively easy to ascertain its magnitude. Some difficulty, however, is encountered in arriving at a satisfactory expression for p , the average price per share. In general, and in the absence of certain adjustments to be described below, the average price per share was taken to be the simple arithmetic average of the highest and lowest sales price quotations of the month:

$$(9) \quad p_i = \frac{p_i'' + p_i'}{2}.$$

It may be objected that an average of high and low prices does not

COMMON-STOCK INDEXES

strictly represent the average price for all shares traded in the month, but it will be readily understood that so vast a task as a computation on the latter basis would be impracticable even if the data were available. The arithmetic average of the monthly high and low prices was employed, in preference to the geometric or harmonic average, in part because of the greater ease of computation, and also because of the tendency of the number of shares traded to increase in a rising market and (but for exceptional panic conditions) to decrease in a declining market. Thus the arithmetic mean, being higher than the geometric or harmonic, would tend to approximate more closely an average price arrived at by weighting the price for each transaction by the number of shares traded. This problem of determining the average price per share is not to be confused with the problem of measuring investment experience by an index number of which this average price is but a part.

Whenever a stock or cash dividend is declared, or rights are issued, it is necessary, in arriving at the average price per share, to make some adjustment of the price data. These adjustments are quite different from the corrections which must be made in the index number itself on account of the pecuniary changes mentioned above, which will be explained on pages 20-24. If a stock dividend is distributed to stockholders of record in month i , the highest price which prevailed during the month will generally not apply to the number of shares outstanding at the end of the month. In fact, if the month's highest price prevailed on the day before the stock went ex dividend (i.e., the day after which any seller retains his claim to the dividend in question), we should expect the price on the following day to be $\frac{p_i''}{k_i}$, in a horizontal market, and we should accordingly express the average price per share as

$$(9.1) \quad p_i = \frac{\frac{p_i''}{k_i} + p_i'}{2},$$

where all the symbols have the meanings assigned above. If the stockholder is given a "right" to purchase $k_i - 1$ additional shares at a price of $p_{r,i}$ per share, for each share he now holds, there will be an increase in the number of shares outstanding, exactly as though a stock dividend of $k_i - 1$ shares for each share held had been declared, but the amount $p_{r,i}$ which the company receives for each new share issued prevents the price of the stock from falling exactly in inverse

CONSTRUCTION OF THE STOCK PRICE INDEXES

proportion to the increase in number of shares outstanding. It is this result which distinguishes the right from the stock dividend. Indeed, in a horizontal market the price which may be expected when the issue goes ex rights will exceed by $\frac{(k_i-1)p_{ri}}{k_i}$ the price to be expected if the substitution of k_i new shares for each share outstanding had been unaccompanied by any revenue for the corporation. Accordingly, the average price per share in any month in which an issue goes ex rights must be expressed as

$$(9.2) \quad p_i = \frac{\frac{p_i''}{k_i} + \frac{k_i-1}{k_i} p_{ri} + p_i'}{2} = \frac{p_i'' + (k_i-1)p_{ri} + k_i p_i'}{2k_i},$$

where again the symbols have the meanings ascribed above. The indexes composing Series P were not corrected for cash dividends, and consequently no adjustment was made in the average price per share, on account of cash dividends, in these indexes. But since Series C indexes were corrected for the distribution of cash dividends, the average price per share was also adjusted whenever a dividend of d_i per share was paid to stockholders of record in month i . On the ex-dividend date, in the absence of other price-influencing factors, the price of the issue falls by the amount of the cash dividend and so, if the month's high may be taken as the price on the previous day, as would be the case in a horizontal market, we write in place of (9.2) above

$$(9.3) \quad p_i = \frac{p_i'' + (k_i-1)p_{ri} - k_i d_i + k_i p_i'}{2k_i}.$$

Formula (9.3) is the most general expression for the average price per share. All of the previous expressions may be obtained from it quite simply. If there is no cash dividend, or if cash dividends are ignored, $d_i = 0$, and (9.3) reduces to (9.2). If the increase in number of shares outstanding is due to a stock dividend, and not to the issue of rights, we have only to take $p_{ri} = 0$, and (9.2) reduces to (9.1). If neither rights nor stock dividends are issued, we may take $k_i = 1$, whence (9.1) becomes identical with (9). Similarly, if a cash dividend is declared in the absence of rights, but along with a stock dividend, we have

$$(9.4) \quad p_i = \frac{\frac{p_i''}{k_i} - d_i + p_i'}{2};$$

COMMON-STOCK INDEXES

while, if the cash dividend is the only declaration,

$$(9.5) \quad p_i = \frac{p_i'' - d_i + p_i'}{2}.$$

In the application of formula (9) there were a few scattered instances in which for one or two, or at most three, months no actual prices were available on an otherwise continuously quoted stock. In these cases it was deemed advisable to substitute bid and asked prices from the weekly quotations published in the *Commercial and Financial Chronicle*. Tests were made to determine what method of handling these bid and asked prices would give a satisfactory approximation of the average of actual high and low sales prices. These tests were made with 41 examples for the year 1872 where both high and low monthly sales prices and weekly bid and asked prices could be secured for the same month. It was found that (a) the arithmetic average of the highest bid and the lowest asked prices yielded a close approximation to (b) the arithmetic average of the actual high and low sales prices. For the 41 cases examined, the average of (a) was 0.70 of 1 per cent above the average for (b) and the absolute average deviation of (a) from (b) was 1.91 per cent. Where only bid prices alone, or asked prices alone, were obtainable, an average price was estimated as follows: the ratio by which actual sales prices fell short of all asked prices, and the ratio by which they exceeded all bid prices, were determined. Where only asked prices were available, they were reduced in the former ratio in order to arrive at an estimate of actual prices, and similarly where only bid prices were available, they were increased in the latter ratio.

None of these adjustments just considered changes in the least the *form* of the index number (4), which is the basis of the stock price indexes. They merely alter the precise definition of p , the average price per share. But making the definition of p precise does not make I' reflect the investor's experience. Whenever there are pecuniary changes in his position of the types previously referred to we must correct the index I' itself by multiplying the value product pq , for the issue in which the pecuniary change has occurred, by the appropriate correction factor.

The first case in which the simple value ratio does not reflect the investor's experience is that in which, during month i , a corporation sells additional shares of its stock, at market, for cash or other assets. Here the earning power of the corporation may be presumed to have increased but, assuming that he has not invested additional cash in the new stock, the investor's proportionate share in those earnings

CONSTRUCTION OF THE STOCK PRICE INDEXES

has been reduced. If $k_i - 1$ new shares are sold for each share outstanding, the product $p_i q_i$ (for the stock in question) in the numerator of (4) must be multiplied by $1/k_i$, since an increase in the value of stock outstanding which does not benefit the individual stockholder must not be permitted to affect the index. Note, however, that the index I'_{i+1} for the following month is not affected, for it is assumed that reinvestment in proportion to value of stock outstanding is made at the beginning of each month. Thus the product $p_i q_i$ in the denominator of I'_{i+1} requires no multiplier. When a corporation issues rights, it offers its stockholders the privilege of purchasing, at a reduced price of p_{ri} per share, $k_i - 1$ new shares for each share held. Thus the corporation secures new capital to the amount of $(k_i - 1) q_{i-1} p_{ri}$ and increases its stock outstanding to $k_i q_{i-1}$ shares. For this discussion we may assume a horizontal market such that p'_i , the month's high, is also the price with rights, and p''_i , the month's low, is also the ex-rights price. Thus r_i , the value of a right issued in month i , is simply the difference between p'_i and p_{ri} , divided by the number of rights necessary for the purchase of one share. That is,

$$(10) \quad r_i = \frac{\frac{p'_i - p_{ri}}{1}}{k_i - 1} = (k_i - 1) (p'_i - p_{ri}).$$

The new price p'_i may be found simply by subtracting the value of a right from the old price p''_i :

$$(11) \quad p'_i = p''_i - r_i.$$

But another determination of p'_i will show more clearly these relationships. The new price, based on $k_i q_{i-1}$ ($= q_i$) shares, must reflect the total value of the shares previously outstanding and in addition the new capital received from the distribution of the rights. That is,

$$(12) \quad p'_i = \frac{p''_i q_{i-1} + (k_i - 1) q_{i-1} p_{ri}}{k_i q_{i-1}} = \frac{p''_i}{k_i} + \frac{k_i - 1}{k_i} p_{ri},$$

or, solving for p''_i ,

$$p''_i = k_i p'_i - (k_i - 1) p_{ri},$$

whence

$$(13) \quad p''_i - p'_i = (k_i - 1) (p'_i - p_{ri}),$$

which is simply the value of a right as expressed in (10), thus proving equation (11).

COMMON-STOCK INDEXES

The product $p_i q_i$ in the numerator of formula (4) therefore misstates the investor's position in two ways. The price p_i has dropped, simply because the new shares were sold at a price less than the market. The quantity q_i has increased because of the new shares sold. The product $p_i q_i$ must increase (still supposing a horizontal market), as long as the new shares bring in any capital at all (i.e., unless $p_{ri} = 0$). But the money value of an investor's holdings is unchanged by a rights declaration if he sells his rights and reinvests the proceeds in the stock of the corporation. It is simply his *share* of the financial success of the company which is altered. Therefore we restore the numerator of (4) to a truer representation of the individual stockholder's position by raising the price in the ratio of old price to new, and lowering the quantity in the ratio of the old quantity to new. Thus, instead of $p_i q_i$, we write $\frac{p_i''}{k_i p_i'} p_i q_i$, where p_i'' and p_i' are the with- and ex-rights prices respectively, as before.

Incidentally, the value of a right may be expressed in terms of the with-rights price, the price at which the new shares are offered, and the ratio in which the new number of shares exceeds the old, without explicitly computing the new or ex-rights price per share, for, from (10) and (11),

$$r_i = (k_i - 1) (p_i' - p_{ri}) = (k_i - 1) (p_i'' - r_i - p_{ri}),$$

whence

$$r_i + r_i (k_i - 1) = (p_i'' - p_{ri}) (k_i - 1)$$

or

$$(10.1) \quad r_i = \frac{k_i - 1}{k_i} (p_i'' - p_{ri}).$$

This enables us to express the correction factor $\frac{p_i''}{k_i p_i'}$ without reference to the ex-rights price; that is,

$$(14) \quad c_i = \frac{p_i''}{k_i p_i'} = \frac{p_i''}{k_i (p_i'' - r_i)} = \frac{p_i''}{k_i p_i'' - k_i \frac{k_i - 1}{k_i} (p_i'' - p_{ri})} \\ = \frac{p_i''}{p_i'' + (k_i - 1) p_{ri}}.$$

Formula (14) has several advantages. If only the high, low, and new-share offering price are known for an ex-rights month, we may calcu-

CONSTRUCTION OF THE STOCK PRICE INDEXES

late the correction factor by (14) with only the assumption that the high price is also the with-rights price. In a few instances, when it was known that the month's high occurred after the ex-rights date, the average price of the previous month was used as the with-rights price. A further advantage of (14) is the speed and ease of its application. If a stock selling at \$100 goes ex rights to buy one share at \$50 for each four shares held, we have $p_i'' = \$100$, $k_i = 1.25$, $p_{ri} = \$50$, and the correction factor is simply:
$$\frac{100}{100 + (0.25)(50)} = \frac{100}{112.50} = 0.8889.$$
 Another convenience of formula (14) is that it reveals the fact that a stock dividend is really a special case of rights declaration, with no charge for the new stock for, if $p_{ri} = 0$ in (14), $c_i = 1$, which means that no correction is applied.

If a cash dividend of d_i per share is paid to stockholders of record during month i , the price will fall, in the absence of other market influences, by the amount of the dividend. That is, $p' = p'' - d$, where p'' is the with-dividend and p' the ex-dividend price. The product $p_i q_i$ in the numerator of formula (4) will therefore drop in the ratio $\frac{p'}{p' + d}$ on the ex-dividend date, despite the fact that the investor has sustained no such loss. But, by reinvesting the dividend, the investor can secure $\frac{d}{p'}$ additional shares for each share he holds, and so the value of his holdings is unchanged. That is, $(1 + \frac{d}{p'})p' = p' + d = p''$.

To reflect this reinvestment we must apply a correction factor to the product $p_i q_i$ for the month in which a dividend occurs. This should be $\frac{p' + d}{p'}$, the reciprocal of the ratio of price decline. For many of the stocks, however, especially in the earlier years, only the monthly high and low quotations are known, and the ex-dividend price must be estimated. For an extended period, including 50 dividend payments for which ex-dividend quotations were available, three possible estimates of the ex-dividend price were tested for closeness of agreement with actual ex-dividend price. These three estimates were high minus dividend, low, and monthly average price per share. The tests indicated that the average price per share was superior to either of the other two, as an approximation to the true ex-dividend price. In fact, the mean deviation of average price per share about the ex-dividend price was less than half the mean deviation of either low, or high minus dividend, about the ex-dividend price.

COMMON-STOCK INDEXES

Accordingly the correction factor actually applied to the product $p_i q_i$ was $\frac{p_i + d_i}{p_i}$, where p_i is the average price per share. Incidentally, this means that the number of shares outstanding, q_i , is merely multiplied by $(p_i + d_i)$, instead of p_i , whenever a cash dividend is declared. Such use of the average price per share will evidently introduce no bias. In the case of the 50 dividend payments mentioned there was no discoverable tendency for the average price to lie consistently above or consistently below the first ex-dividend price.

Whenever a Standard Statistics group index is made the basis of the reported Cowles Commission index number, Series C, the correction for cash dividends is applied to the group index, and not to each individual stock in the group. This correction is given by

$$(15) \quad c_i = 1 + \frac{\sum d_i q_i}{\sum p_i q_i}$$

and the actual Standard Statistics index for month i is simply multiplied by c_i , to obtain the Series C index for that same month. Except that the average price per share has not been adjusted for the payment of the cash dividend, this correction yields the same result as that obtained when each individual issue is corrected for its own cash dividend in the manner explained above. However, an important advantage of correcting each issue is that new groupings may be formed from the list of stocks without recomputing the cash-dividend correction (15) for each new group as it is formed.

When all the appropriate corrections had been applied to the $p_i q_i$ products for the various issues in each month i , the final index number was calculated in accordance with formula (4). That is, any factor in the numerator of (4) was obtained by summing the $p_i q_i$ products (including corrections, if any) for all the issues of any one group, such as steels, coppers, etc. The corresponding factor in the denominator of (4) was obtained by summing the products for the same issues for the previous month ($p_{i-1} q_{i-1}$) but without any pecuniary corrections having been applied to the products. Taking c_i as a general expression for such corrections, we might write

$$(16) \quad I_i = \frac{\sum c_i p_i q_i}{\sum p_{i-1} q_{i-1}}$$

Thus the most general form of the Cowles Commission stock price indexes may be expressed:

$$(16.1) \quad I_i = \prod \frac{\sum c_i p_i q_i}{\sum p_{i-1} q_{i-1}}$$

THE STANDARD STATISTICS COMPANY FORMULA

The correction factor c_i must be carried only in the numerator, for otherwise each correction would disappear in the first month after its occurrence.

Occasionally two or more of the changes which require correction of the index I' occurred in the same month. Thus, if earlier in month i the number of shares outstanding was increased from q_{i-1} to, say, q'_i by the sale of $q'_i - q_{i-1}$ shares for cash, and if later in the month an issue of rights raised the number of shares outstanding from q'_i to q_i , we should have two k 's: $k'_i = \frac{q'_i}{q_{i-1}}$ and $k''_i = \frac{q_i}{q'_i}$. The correction involving k'_i would be applied first, and on that result the adjustment involving k''_i would be made.

In correcting for cash dividends paid prior to 1896 it was sometimes difficult to determine the date as of which a stock went ex dividend. Using stocks for which such information was available, an investigation was undertaken to determine the average lag between the ex-dividend date and the date of dividend payment. Analysis of 62 dividend payments from 12 companies in 1872-1873 showed the average lag to be 14.7 days, and a similar analysis of 53 dividend payments from 27 companies in 1895 showed the average lag to be 13.1 days. The average lag for the two samples combined was 14.0 days. All undetermined ex-dividend dates were therefore arbitrarily fixed at 14 days before dividend payment.

When dividends were paid in scrip, it sometimes happened that no quotations were available on the scrip, and it was impossible to determine whether the obligation was to be discharged in stock or in cash. If there was no evidence of any change in capital structure, it was assumed the scrip was paid in cash, and not in stock. The question is relatively unimportant, arising in the case of less than 0.5 of 1 per cent of all dividends paid. In treating such as cash they were not discounted for delay in redemption because information was lacking as to redemption dates. Any error arising from this source would obviously be negligible.

7. The Standard Statistics Company Formula

As noted on page 3, the Cowles Commission stock price indexes, Series P, are continued subsequent to 1917 (in some cases after 1925 or later) by monthly averages of the Standard Statistics weekly indexes. It will be necessary to explain the method used in the con-

COMMON-STOCK INDEXES

struction of the latter, since it differs somewhat from that employed in the case of the Cowles Commission indexes.

The Standard Statistics Company describes the stock-price-index formula it employs in computing its weekly indexes as a "base-weighted aggregative," and gives as its algebraic expression

$$(2) \quad I_i = \frac{\sum p_i q_0}{\sum p_0 q_0},$$

where the p_i are the closing prices of the stocks in the group of issues for which the index is calculated, on the Wednesday of the week to which the index refers; the q_0 are the corresponding quantities of stock outstanding in the base period; and $\sum p_0 q_0$ is taken as a simple arithmetic average of the value of stock outstanding on each of the 53 Wednesdays in 1926.

Formula (2) has been discussed on pages 11 and 12. It is a fixed-base index number. The reader may conclude that the formula used by the Standard Statistics Company is not a value ratio, since in formula (2) base-year quantities are the numerator weights. However, the actual procedure employed by Standard Statistics is to modify formula (2) so as always to keep these numerator weights equal to the number of shares outstanding on the index date. Thus, if a stock dividend or split is made by any company, the correction of the index for such a change is accomplished by replacing q_0 in the numerator by q_i , the number of shares of stock outstanding on the date for which the index is calculated. Hence, if there were no increases in stock outstanding, or if the only increases were stock dividends or splits, formula (2) could always be replaced by the value ratio:

$$(4.1) \quad I_i = \frac{\sum p_i q_i}{\sum p_0 q_0}.$$

The Standard Statistics Company makes no correction for cash dividends, but formula (4.1) is adjusted: (a) when additional stock is sold for cash or other assets, or is distributed to stockholders consequent to the issue of rights, and (b) when a stock is added to, or removed from, an index. The fact that (4.1) is a fixed-base formula requires that corrections applied to it take a form somewhat different from those used in the case of the Cowles Commission chain-base indexes. It will simplify the explanation of these adjustments if the following notation be adopted:

Let $\sum^j p_i q_i$ be the value in period i of those issues which make up the list of *effective* stocks for period j . A stock is effective in period j

THE STANDARD STATISTICS COMPANY FORMULA

if its quotation for that period is permitted to affect the index number for that period. Formula (4.1) would then be written

$$(4.2) \quad I_i = \frac{\sum_1^i p_i q_i}{\sum_1^1 p_0 q_0}$$

Of course $\sum_1^i p_0 q_0$ may be substituted for $\sum_1^1 p_0 q_0$ in (4.2) since it is assumed that no change is made in the list of stocks. Furthermore $\sum_1^1 p_0 q_0$ will always equal $\sum_0^0 p_0 q_0$, for the effective stocks in the first period and base period must be the same. The importance of this notation will appear later.

The sale of additional stock in period i to the amount of $q_i - q_{i-1}$ at a price of p_{si} per share, whether under the terms of rights or otherwise, will add to the numerator of (4.2) an amount $\sum_1^i p_{si} (q_i - q_{i-1})$ which does not represent a profit to investors. This summation is taken over all the effective issues in period i . (For any issue in which additional stock was not sold, $p_{si} = 0$). In order to neutralize the effect of such an addition to the value of stock outstanding, Standard Statistics computes a new base value as follows for that group of stocks in which the sale of new stock has occurred. The current value of stock outstanding, including the proceeds of the sale of stock, is divided by the current value of stock outstanding, excluding these proceeds, and the old base value $\sum_1^1 p_0 q_0$ is multiplied by this ratio to obtain the new base value. The index thus becomes

$$(17) \quad I_i = \frac{\sum_1^i p_i q_i}{\sum_1^1 p_0 q_0 \prod a_i}$$

where

$$a_i = \frac{\sum_1^i p_i q_i}{\sum_1^i p_i q_i - \sum_1^i p_{si} (q_i - q_{i-1})}$$

and each of the corrections a_i is used in the denominator of the index to which it applies for all subsequent periods. As before,

$$\prod a_i = a_1 a_2 \cdots a_i.$$

To a fixed-base formula must also be applied a special adjustment if the stocks of new companies are to be included in the indexes or old issues withdrawn. Here the new notation which distinguishes ef-

COMMON-STOCK INDEXES

fective stocks is of considerable assistance. The Standard Statistics procedure is to adjust the numerator of (17) so as to include the value of all new issues to be added in period i , and exclude the value of all old issues to be withdrawn in period i . The numerator of (17) after adjustment represents simply the value of the effective stocks for the period $i+1$, and may be written $\sum^{i+1} p_i q_i$.

The value of new stocks added to the list of included issues does not represent a profit to investors, nor does the value of old stocks removed represent a loss. Therefore, the base value must be adjusted so that the additions and withdrawals will not result in a change in the level of the index for the period in which they occur. This adjustment is made by multiplying the previous base value by $\frac{\sum^{i+1} p_i q_i}{\sum^i p_i q_i}$. This

factor simply restores the index to the figure which would have been obtained had no new issues been introduced, or old issues withdrawn, in period i . The most general form of the Standard Statistics formula is therefore

$$(18) \quad I_i = \frac{\sum^{i+1} p_i q_i}{\sum^1 p_0 q_0 \prod \left[\frac{\sum^i p_i q_i}{\sum^i p_i q_i - \sum^i p_{si} (q_i - q_{i-1})} \frac{\sum^{i+1} p_i q_i}{\sum^i p_i q_i} \right]}$$

or, more simply,

$$(18.1) \quad I_i = \frac{\sum^{i+1} p_i q_i}{\sum^1 p_0 q_0 \prod \frac{\sum^{i+1} p_i q_i}{\sum^i p_i q_i - \sum^i p_{si} (q_i - q_{i-1})}}$$

Since

$$\sum^1 p_0 q_0 \prod \sum^{i+1} p_i q_i = \sum^{i+1} p_i q_i \prod \sum^i p_{i-1} q_{i-1},$$

(18.1) may be still further reduced to

$$(18.2) \quad I_i = \prod \frac{\sum^i p_i q_i - \sum^i p_{si} (q_i - q_{i-1})}{\sum^i p_{i-1} q_{i-1}}.$$

If no additional stock is sold in any period, the p_{si} are all zero, and (18.2) becomes

THE STANDARD STATISTICS COMPANY FORMULA

$$(18.3) \quad I_i = \prod_{i=1}^i \frac{\sum p_i q_i}{\sum p_{i-1} q_{i-1}}.$$

If also the original list of issues is retained throughout the construction of the index, $\sum_{i=1}^i p_i q_i = \sum_{i=1}^{i+1} p_i q_i$, and (18.3) reduces to

$$(4.2) \quad I_i = \frac{\sum_{i=1}^i p_i q_i}{\sum_{i=1}^1 p_0 q_0}.$$

There are two minor differences between the Standard Statistics and Cowles Commission index formulas: (a) because of scarcity of price data for earlier years, the definition of p_i must be modified; and (b) because of the different definition of p_i , the correction for the sale of rights must be changed. Price data for the earlier years are confined in the case of each stock to tables of monthly highs and lows published in the *Commercial and Financial Chronicle*. No information is given regarding the day of the month to which any such quotation applies. It was therefore necessary, in the case of the Cowles Commission indexes, to let p_i represent the simple arithmetic average of monthly high and low, subject to adjustments as described on pages 18-20. These limitations in the data also necessitated resorting to approximations described on page 22 in the case of corrections for the issue of rights. The Standard Statistics indexes cover only the more recent period, for which daily quotations are available. It was not necessary, therefore, that they employ these approximations.

The general expression for the Cowles Commission indexes, Series P (and, if the corrections for payment of cash dividends are included in c_i , for Series C as well) is given by

$$(16.1) \quad I_i = \prod_{i=1}^i \frac{\sum c_i p_i q_i}{\sum p_{i-1} q_{i-1}}.$$

However, if daily closing prices had been available, a definition of p_i similar to that employed by Standard Statistics could have been used, and the correction for changes in capital structure could have been accomplished by subtracting from the new value of stock outstanding the new capital received, rather than by computing a reduction factor [formula (14)] by which the value of stock outstanding must be multiplied.

COMMON-STOCK INDEXES

Following this procedure, formula (16.1) would be written

$$(18.2) \quad I_i = \prod \frac{\sum p_i q_i - \sum p_{s,i} (q_i - q_{i-1})}{\sum p_{i-1} q_{i-1}}$$

which, as previously shown, is the Standard Statistics general formula.

8. Fisher's "Ideal" Formula

If Fisher's "ideal" index-number formula,

$$(1) \quad I_i = \sqrt{\frac{\sum p_i q_0 \sum p_0 q_i}{\sum p_0 q_0 \sum p_i q_i}},$$

had been made the basis for the computation of the Cowles Commission indexes, Series P and C, it would still have been necessary to introduce corrections for changes in capital structure and the distribution of cash or other assets. With these corrections, the expression corresponding to the Cowles Commission index formula (16.1) would be given by

$$(19) \quad I_i = \prod \sqrt{\frac{\sum c_i p_i q_i}{\sum p_{i-1} q_{i-1}} \frac{\sum p_i q_i}{\sum \frac{1}{c_i} p_{i-1} q_{i-1}}}$$

where all the symbols have the meanings previously ascribed to them.

Clearly (19) differs from (16.1) only when $c_i \neq 1$, that is, when the pecuniary position of the investor is altered. This may be due to the sale by the corporation of additional stock or to the distribution of assets, as has been explained. Both formulas contain corrections for these pecuniary changes, but they do not yield identical results.

The first of the two factors under the radical in formula (19) is identically formula (16), the characteristics of which have been considered in detail. It shows the proportion which the value of holdings at the end of the month, after correction for pecuniary changes, bears to the value of holdings at the beginning of the month, for an investor who apportioned his funds among the several issues in proportion to the total value of stock of each issue outstanding at the beginning of the month. The second factor shows the proportion which the value of his holdings at the end of the month bears to the value of his holdings at the beginning of the month, for an investor whose apportionment of funds among the several issues is in accordance with the

FISHER'S "IDEAL" FORMULA

total value of each issue outstanding at the beginning of the month, after correction for pecuniary changes occurring during the month in question.

Thus, whereas the Cowles Commission formulas assume a redistribution of funds among the several issues at the beginning of each month, the use of formula (19) would give, as the investor's experience, a geometric average of the experience of two investors, one of whom held the various issues in proportion to first-of-month values, while the other's holdings were distributed in accordance with these values corrected for pecuniary changes occurring during the month.

As empirical tests of the divergence of two indexes based on formulas (16.1) and (19), two surveys were made comparing the formulas during the 20 years 1871-1890. In these earlier years any such effect would be more apparent because the indexes contained fewer stocks, and pecuniary changes in any one issue would thus have more influence on the index in which that issue was contained. Also, the group indexes were considered, rather than the All Stock index, because the larger number of issues included in the latter tends to reduce the influence of a correction applicable to any one issue.

The first survey included all instances of corrections which were necessitated by changes in capital structure during these 20 years. There were 24 such cases, distributed as follows among 6 different group indexes: 11 in the Telephone and Telegraph index, 5 in the Coal index, 3 each in (a) Miscellaneous Services and (b) Operating Utility Companies, and 1 each in (c) Mining and Smelting and (d) Shipping and Shipbuilding. I_i was calculated according to formulas (16.1) and (19) for these 24 cases, and the results of the two calculations are compared in Table 2. As is indicated in Column C of that table, for no monthly link do the results secured by the two formulas differ from each other by as much as 1 per cent. Furthermore, in 11 cases formula (16.1) gives a smaller figure and in 13 cases a larger figure than formula (18), thus suggesting that the errors are not cumulative. In column D of Table 2 are chained by product cumulation the items reported in column C and from this it will be seen that, if formula (19) had been employed instead of (16.1), the maximum change at any point in the index would not have exceeded 1 per cent.

The second survey was made to test empirically whether the correction for the payment of a cash dividend would cause formulas (16.1) and (19) to diverge. The Miscellaneous Services group was selected, and indexes computed for each of the first 20 months in which one or both of the two largest of the four issues composing this group

COMMON-STOCK INDEXES

went ex dividend. Column C of Table 3 indicates that formulas (16.1) and (19) do not differ by as much as 0.031 of 1 per cent for any one of these 20 monthly links, although frequently two of the issues required correction for cash dividends in the same month. Column D shows that when the ratios of column C are chained the maximum change which would result at any time within these 20 months if formula (19) were used instead of (16.1) would be less than 0.14 of 1 per cent.

It is evident, therefore, that the results secured by formula (16.1) are for all practical purposes identical with those which would have

CRITICISMS OF WELL-KNOWN INDEXES

been secured by formula (19). Since the labor of computation in the former case is substantially less than in the latter, the selection of the formula actually employed would appear to be entirely justified.

9. Criticisms of Well-Known Indexes

It may be of interest to consider what discrepancies are apt to arise between different stock price indexes, because of different formulas and sampling procedures in use in their construction. The places at which criticisms of existing indexes focus are: (1) corrections, (2) sampling, and (3) weighting.

By *corrections* are meant proper adjustments to offset the effect of such occurrences as the distribution or sale of stock. It would seem desirable, if one were constructing a price index for 20 industrial common stocks including United States Steel, which on May 31, 1927 sold for \$175 and the next day sold for \$125 as the result of a 40 per cent stock dividend, that some correcting factor be applied to the \$125 price to preserve the continuity of the index. However, in the case of the Dow-Jones industrial averages, this formerly was not done, and as a result an improper reduction of 1.43 per cent was permitted to occur in the index on the day noted. As another example of this sort of error, the *New York Times* daily average of 25 industrial stocks

COMMON-STOCK INDEXES

was incorrectly permitted to decline 8.68 points in March, 1926 as the result of failure to adjust the average price per share for a four-for-one split in the stock of the American Can Company. The New York Stock Exchange "Unadjusted Average Price," a comprehensive series from 1925 monthly, presented separately for 33 groups and 59 subgroups, makes no corrections for stock split-ups, rights, etc., although these corrections are made in the case of its "Stock Price Index" which represents the market as a whole without subclassifications. Other indexes ignore small stock dividends and rights. The daily Associated Press averages, for example, adjust only for changes of 10 per cent or more in the prices of individual stocks due to the issue of rights or stock dividends. Errors of this sort are cumulative, imparting a downward bias. Thus, they destroy the significance of the trend over a period of years.

A serious *sampling* distortion occurred in the Dow-Jones industrial average, in connection with the substitution of new stocks in the index. This average opened, subsequent to the moratorium in 1914, 23 per cent below the level recorded when the moratorium was declared. In reality no such decline as this actually occurred. In fact, the stocks used before the moratorium, if continued in the index, would have brought about an advance of nearly 5 per cent instead of a decline of 23 per cent.

With regard to various methods of sampling, the most common defects are due to employing hindsight in the selection of the sample. In extending a stock index back through early years, authors are apt to include only "stocks that are outstanding today," or "stocks on which substantially complete quotations exist." Such a procedure is likely to impart an upward bias to an index intended to represent the experience of the hypothetical investor described on page 2, since an investor in one of the early years represented by the index would have no way of knowing which stocks would subsequently be the most important or which would later afford a complete record of quotations. Stocks meeting those requirements would probably turn out more successful as investments than the average of all stocks.

In other cases, e.g., certain of the indexes published in the *Harvard Review of Economic Statistics*, issues have been excluded on the ground that they acted erratically, or did not show appreciable cyclical movements, or manifested great irregularities or sudden breaks. None of these is a proper reason for excluding stocks from indexes such as those of the Cowles Commission. The exclusion of such classes of stocks might even result in some bias. For example, it is conceivable that because of the activities of pools the stocks of conspicuously

CRITICISMS OF WELL-KNOWN INDEXES

successful enterprises might be found to move in a more unpredictable and erratic manner than the average stock. The same might be true of stocks in new and rapidly growing industries.

With regard to methods of *weighting*, the Dow-Jones, *New York Times*, Associated Press, and *New York Herald Tribune* indexes are simple arithmetic averages of actual prices. The influence of each issue upon the average is thus proportional to the magnitude of its price per share. As an illustration, in June, 1937, Standard Oil of New Jersey was selling at 65, Allied Chemical at 215. In the Dow-Jones averages the former received a weight of less than one-third the latter. Yet the market value of the common stock of the former was \$1,680 millions and of the latter \$476 millions. In the Cowles Commission indexes Standard Oil of New Jersey would be given 3.5 times, instead of 0.3 times, the weight accorded to Allied Chemical.

It should also be noted that the problem of weighting cannot be satisfactorily disposed of by substituting for simple averages of actual prices simple averages of price relatives, since this tends to attach equal importance to all issues in the average, which is surely no better than permitting the highest-priced stocks to dominate the index. A procedure which equates General Motors with Johns-Manville has little to recommend it as a measure of average investment experience, since the former, at the end of 1937, represented more than 20 times the total security value of the latter.

Weighting inversely to the range of an issue, as is done in the Axe-Houghton and *Annalist* indexes, is likewise unsatisfactory in that it tends to exaggerate the movements of the more stable issues. There is no clear reason why such a result should be desired.

Among current stock price indexes constructed from United States data, the Standard Statistics weekly indexes are least subject to the criticisms we have considered. The Cowles Commission indexes are constructed on essentially the same principles as these.¹⁶ It may be of interest to determine whether such considerations are purely academic, or whether they are found to be of practical importance. In Table 4 are presented the figures for 5 well-known indexes, giving

¹⁶ For certain other countries are published indexes similar to those of the Standard Statistics Company and the Cowles Commission in that they are aggregates weighted by shares outstanding and corrected for changes in capital structure. One is the index of the Department of Trade and Commerce, Dominion Bureau of Statistics, for Canada, monthly and weekly, 1926-, daily 1937-, which includes 96 stocks. *Det Statistiske Centralbyrå* in Norway has recomputed its index from July, 1929 as a geometric average weighted by shares outstanding. It is given for 5 subgroups and includes all stocks listed on the Oslo Stock Exchange. Apparently the first indexes of this type to be published were the weekly and monthly series started in 1917 by *Affärsvärlden* in Sweden. These were replaced by another index in 1924 which is published currently and includes 52 stocks.

COMMON-STOCK INDEXES

the values as of July 6, 1932, which were close to the low of the depression, and January 31, 1934. To facilitate comparison, in parentheses under the figures themselves appear percentages relative to the July 6, 1932 base of 100.

TABLE 4
INDUSTRIAL COMMON-STOCK PRICE INDEXES

	July 6, 1932	January 31, 1934
1. Moody's — 60 stocks	35.85 (100)	118.55 (330.7)
2. Standard Statistics — 351 stocks	33.2 (100)	88.2 (265.7)
3. Dow Jones — 30 stocks	44.08 (100)	107.22 (243.2)
4. <i>New York Times</i> — 25 stocks	62.31 (100)	146.37 (234.9)
5. <i>Annalist</i> — 33 stocks	70.5 (100)	144.7 (205.2)

The relatives given for January 31, 1934 indicate considerable discrepancy among the actions of these various indexes. Moody's index records an advance of 230.7 per cent while the *Annalist* index shows the gain as only 105.2 per cent. These divergences developed in 19 months and, while it must be conceded that the period selected was spectacular, nevertheless the conclusion is indicated that variations in formula and sampling produce distinctly different results.

In the following example will be considered the results of constructing various types of indexes using identical data. The stocks, with prices, shares outstanding, and shares traded for the week, are presented in Table 5.

Taking these data in each case, six different indexes were constructed as follows:

Index 1. The simple aggregative of the actual prices. The index for January 31, 1934 is $\frac{\sum p_1}{\sum p_0}$, with the July 6, 1932 base equal to 100.

This is the same general type as the Associated Press, *New York Times*, *New York Herald Tribune*, and Dow-Jones averages, except that in these indexes various constants other than $\sum p_0$ have been taken as the denominator.

Index 2. An arithmetic average of relatives to the July 6, 1932 base of 100. The index for January 31, 1934 would then be $\frac{\sum \frac{p_1}{p_0}}{n}$.

Moody's indexes are of this type.

CRITICISMS OF WELL-KNOWN INDEXES

TABLE 5
DATA FOR COMPUTATION OF ILLUSTRATIVE INDEXES

Company	July 6, 1932			January 31, 1934		
	Price	Shares Traded	Shares Out.	Price	Shares Traded	Shares Out.
	p_0	q'_0	q_0	p_1	q'_1	q_1
Allied Chemical	46.50	46,700	2,214,099	154.00	9,400	2,214,099
American Can	32.50	105,100	2,473,998	100.25	32,400	2,473,998
Bethlehem Steel	8.75	6,000	3,200,000	47.00	87,600	3,200,000
Corn Products	25.50	17,100	2,530,000	82.50	14,800	2,530,000
Eastman Kodak	37.25	35,900	2,250,921	89.75	14,000	2,250,921
General Electric	9.75	76,800	28,845,927	22.75	196,600	28,845,927
General Foods	20.00	14,100	5,251,000	36.00	21,000	5,251,000
General Motors	7.75	42,700	43,500,000	39.75	352,800	43,500,000
Int'l. Bus. Mach.	61.50	14,500	703,345	147.00	2,400	703,345
Int'l. Nickel	4.75	52,500	14,584,025	23.25	102,300	14,584,025
Johns-Manville	11.50	2,300	750,000	64.50	27,500	750,000
Loew's, Inc.	15.00	10,100	1,464,205	29.00	86,200	1,464,205
Nash Motors	9.50	800	2,730,000	31.00	80,100	2,730,000
National Steel	14.50	1,300	2,156,832	56.25	19,700	2,156,832
Procter and Gamble	21.25	11,800	6,410,000	40.50	13,500	6,410,000
Sears, Roebuck	10.50	12,200	4,780,111	47.25	119,000	4,780,111
Stan. Oil of Cal.	18.50	7,900	13,102,900	42.25	39,200	13,102,900
Texas Corp.	9.75	5,800	9,851,237	28.25	52,400	9,851,237
U. S. Steel	22.50	75,900	8,703,252	56.50	154,500	8,703,252
Woolworth	24.25	59,500	9,750,000	50.00	52,200	9,750,000

Index 3. An aggregative of prices times quantities, the index for January 31, 1934 being $\frac{\sum p_1 q_0}{\sum p_0 q_0}$, the prices for both dates being weighted by the shares outstanding July 6, 1932. This is the familiar Laspeyres formula [formula (2), page 11]. Since in this example there are only two periods, and no changes in the number of shares outstanding, no question of adjustments because of changes in capital structure, or in the list of stocks included, need be considered. For these reasons the Standard Statistics index-number formula and the Cowles Commission formula will yield results identical with those of the Laspeyres formula in this application.

Index 4. An aggregative similar to Index 3, except that the weights are the number of shares traded, instead of number outstanding. The index for January 31, 1934 would be $\frac{\sum p_1 q'_0}{\sum p_0 q'_0}$ where q'_0 is the number of shares traded in the week of July 6, 1932. Averages formerly published by *Barron's* weekly were of this type.

Index 5. A geometric mean of two aggregative index numbers, the first aggregative being Index 3, above, and the second being similar, except that the weights are the quantity of stock outstanding

COMMON-STOCK INDEXES

January 31, 1934. This is, of course, simply formula (1), page 11, or Irving Fisher's "ideal" formula. However, it reduces to Index 3 in this case, since the number of shares outstanding is unchanged between the two dates. That is, $q_1 = q_0$.

Index 6. A geometric mean of two aggregative index numbers, similar to Index 5 above, except that the weights are the number of shares traded on the two dates. This would be expressed by

$$I_i = \sqrt{\frac{\sum p_1 q'_0}{\sum p_0 q'_0} \frac{\sum p_1 q'_1}{\sum p_0 q'_1}}$$

Since $q'_1 \neq q'_0$, Index 6 will not reduce to Index 4.

Table 6 gives the index numbers for January 31, 1934, with July 6, 1932 as a base, according to each of the 6 formulas just considered.

TABLE 6
ILLUSTRATIVE INDEX NUMBERS

	July 6, 1932	Jan. 31, 1934
Index 1	100	288.6
" 2	100	324.0
" 3	100	301.7
" 4	100	283.7
" 5	100	301.7
" 6	100	303.5

In his book, *The Making of Index Numbers*, Irving Fisher rejects the formulas used in Indexes 1 and 2 above as unsatisfactory on the ground that the latter has an upward bias, and that the former, while not biased, is highly erratic. Indexes 4 and 6 are computed from formulas of high standing, but the use of number of shares traded as weights renders them less satisfactory than Indexes 3 and 5 as measures of investor experience. This is not to deny that the student of "technical" market action might find the Indexes 4 and 6 of special interest. In the examples cited Indexes 3 and 5 yield identical results. The reasons for employing Index 3 rather than 5, when the results are not identical, have already been discussed on pages 30-33.

A graphic representation of the divergences in existing industrial stock price indexes is given in Chart 3 on page 55 which depicts (1) the *Axe-Houghton-Annalist* index 1883 to 1938; (2) an index constructed by R. W. Schwabacker, while in the employ of the New York Federal Reserve Bank, and later published by the Bank, covering the period from 1872 to 1896, and continued from that point to 1938 by the Dow-Jones index; and (3) the Cowles Commission-Standard Sta-

CRITICISMS OF WELL-KNOWN INDEXES

tistics Industrial index, which covers the full period, 1871–1938.

The first important discrepancy to note is that the N.Y.F.R.B. index reaches a peak at the beginning of 1873, whereas the peak in the Cowles Commission index came a year later in 1874, by which time the N.Y.F.R.B. index stood 12 per cent lower than in 1873. From the low in 1877 to the high in 1881, the N.Y.F.R.B. index advanced 100 per cent, the Cowles Commission index 64 per cent. From the peak in 1881 to the low at the beginning of 1885 the N.Y.F.R.B. index declined 42 per cent while the Cowles Commission index declined 25 per cent and reached its low 7 months earlier. From these lows the Cowles Commission index advanced 84 per cent to a peak in June, 1889, whereas the N.Y.F.R.B. index advanced only 50 per cent during the same interval. From this point to the beginning of 1893 the N.Y.F.R.B. index showed a net advance of 14 per cent to a new peak, and the Cowles Commission index a net decline of 3.6 per cent.

The Dow-Jones index reached a peak at the beginning of 1906, the Cowles Commission index at the end of 1906. In the bull market following the panic of 1907 the Cowles Commission index gained 109 per cent up to the end of 1909, whereas the Dow-Jones index gained 68 per cent. Following the moratorium in 1914 the Cowles Commission index resumed only 5 per cent lower than when the exchange was closed, whereas the Dow-Jones monthly index recorded the re-opening as off 28 per cent (the 23-per-cent drop mentioned on page 34 is for the daily index).

Turning to the Axe-Houghton index, we note that this reached a peak in 1890, whereas the top in the Cowles Commission index was one year earlier. A peak in the Axe-Houghton index is found at the beginning of 1903; the corresponding top in the Cowles Commission index preceded this by 20 months, and during this period the Cowles Commission index declined 12 per cent while the Axe-Houghton index was advancing 11 per cent. In the advance following the panic of 1907 the Cowles Commission index gained 109 per cent while the Axe-Houghton index recorded an advance of 69 per cent. The advance from 1921 to 1929 was considerably greater in the Cowles Commission index than in the case of the Axe-Houghton, as was likewise the decline from 1929 to 1932.

It should also be noted that at the end of 67 years the Cowles Commission–Standard Statistics index had gained 396 per cent whereas the N.Y.F.R.B.–Dow-Jones averages were up only 202, and that in the 56 years from 1883 to 1938 the Cowles Commission–Standard Statistics index had gained 377 per cent and the Axe-Houghton–*Annalist* indexes only 205 per cent.

COMMON-STOCK INDEXES

An important reason for believing that the Cowles Commission-Standard Statistics indexes portray better than the other two industrial indexes the average investment experience of holders of common stocks is the considerably greater comprehensiveness of the former. The N.Y.F.R.B. index, from 1871 to 1896, included exactly 10 stocks. The Dow-Jones index started with 12 stocks in 1897, increased to 20 in 1916, and to 30 in 1928. From 1883 to 1929 the Axe-Houghton index ranged from 10 to 30 stocks, and the *Annalist* index from 1930 to 1938 included from 33 to 72 stocks. The Cowles Commission industrial index included 12 stocks in 1871. By 1897 the number had grown to 23, and by 1917 to 157. In 1918 the Standard Statistics industrial index contained 146 stocks and by 1926 this number had increased to 351, approximately the number included from then until the end of 1938. Furthermore, in the Cowles Commission-Standard Statistics indexes each stock is weighted according to the value of total shares outstanding, whereas the N.Y.F.R.B.-Dow-Jones series are simple averages of actual prices, and the Axe-Houghton-*Annalist* indexes are averages of actual prices weighted inversely to the range of each issue. Also, the Cowles Commission-Standard Statistics indexes have incorporated corrections for all issues of additional stock, including rights, whereas in the case of the N.Y.F.R.B.-Dow-Jones series this was not done except in the more recent years of the Dow-Jones. The *Annalist* index makes adjustments for rights "when their market value is great enough to influence the index." The failure to make corrections imparts a downward bias to an index and the failure to weight stock prices by the shares outstanding exaggerates the importance of the smaller corporations. Omitting an important fraction of stocks for which quotations are available introduces into the behavior of the index random errors, or even bias, depending on the basis used for selection of the sample, and its comprehensiveness. It will thus be seen that the divergences of the other indexes from the Cowles Commission-Standard Statistics series are probably due to defects of the others with regard to sampling, corrections, and formulas employed.

In Appendix I are presented brief descriptions of the principal common-stock indexes published in the United States and abroad.

10. Some Important Facts Disclosed by the Indexes

The Cowles Commission All Stock index, Series P, indicates that the average rate of increase in market value of common-stock holdings in the United States for the 68 years from 1871 to 1938 has been

SOME IMPORTANT FACTS DISCLOSED BY THE INDEXES

1.8 per cent a year. The average annual rate of increase for the Railroad and Utility stocks has been 0.0 and 0.6 of 1 per cent respectively, whereas for the Industrials it has been 2.8 per cent.¹⁷

The yield, or ratio of cash dividend payments to stock prices, has averaged 5.0 per cent a year for the All Stock index since 1870. For the Railroads the average yield has been 4.8, for the Industrials 5.3, and for the Utilities 5.5 per cent. If we add cash dividend payments to changes in the market values of stocks, determined as described above, the total return has been 4.8 per cent for the Railroads, 6.1 for the Utilities, 8.1 for the Industrials, and 6.8 for the three groups combined.¹⁸ This is to be compared with an average return of about 4.2 per cent obtainable from high-grade bonds and 4.6 per cent from prime commercial paper for this period.¹⁹

In Chart 10, page 62, are presented records for 68 years of the interest received from an investment of \$100 in bonds, made at the beginning of 1871, and of the dividend income from \$100 invested at the beginning of 1871 in common stocks. The bond interest, figures for which are presented in Appendix V, is that from a hypothetical fund reallocated at the beginning of each year so that an equal amount is invested in each issue included for that year in Macaulay's index of bond yields.²⁰ The stock income figures are derived from the Cowles Commission All Stock index of dividend payments, Series D_a-1. The actual dollar income on \$100 invested in 1871 in high-grade railroad

¹⁷ These rates of increase represent the slopes of least-squares first-degree parabolas fitted to the logarithms of annual averages of the Series P indexes from 1871 to 1938 except in the case of the Railroad index where the least-squares trend did not seem plausibly to represent the data for the more recent years. Here the trend was adjusted by inspection.

¹⁸ When least-squares first-degree parabolas are fitted to the logarithms of the Series C indexes, including cash dividends, the indicated rate of return is raised slightly. It then becomes 6.3 per cent for the Utilities, 8.8 per cent for the Industrials, and 6.9 per cent for All Stocks. In the case of the Railroad index the least-squares trend is again a poor fit for the more recent years, ending about 250 per cent above the index in December, 1938. If this is lowered by inspection so that at the end of 1938 it conforms more nearly to the other trend lines used here, the indicated annual return on the Railroad stocks becomes 4.6 per cent.

¹⁹ This estimate of 4.2 per cent for the average yield on high-grade railroad bonds from 1871 to 1938 is based on an index compiled by the National Bureau of Economic Research for the period from 1871 to 1932, continued by the Standard Statistics Company subsequent to then, and currently published in *Standard Trade and Securities*, Current Statistics section. The average yield on 4 to 6 months commercial paper for the period under consideration was 4.6 per cent, according to the index published by the Standard Statistics Company. So far as we know there are available no studies indicating the return for this period on all bonds, including the more speculative issues. In the absence of evidence to the contrary it seems reasonable to assume that the more frequent defaults in the lower-grade issues would about offset the higher yields which they afford.

²⁰ *Op. cit.*, pp. A5-A107. This index is composed of a changing list of high-grade long-term railroad bonds. The number of issues varies from 20 to 45.

COMMON-STOCK INDEXES

bonds declines gradually from \$6.91 in that year to \$5.89 in 1938. The income from \$100 invested in stocks in 1871 was \$5.26 in that year. This rose to \$6.71 in 1874 and from that point declined to \$3.67 in 1878. The next upswing was to \$6.82 in 1883 and from there a long decline set in to a low of \$3.70 in 1897. From there the rise, except for a decline from 1917 to 1921, was almost continuous to the all-time peak of \$17.50 in 1929. There followed a precipitous four-year decline to \$6.74 in 1933, and a recovery to \$14.38 in 1937. From the foregoing it will be seen, as might be expected, that the dollar income from common stocks has fluctuated considerably more violently than the dollar income from high-grade bonds. However, a different picture is presented in Chart 11, page 63, where both series are expressed in dollars of constant purchasing power through deflation by the New York Federal Reserve Bank Index of General Prices. When the fluctuations in the purchasing power of the dollar are thus eliminated, the resulting "real" income from stocks is almost as stable as that from bonds. For instance, the real bond income declined by 11.0 per cent from 1879 to 1882, by 67.1 per cent from 1896 to 1920, and by 19.8 per cent from 1933 to 1937. On the other hand, the three principal declines in real common-stock income were 36.7 per cent from 1883 to 1897, 46.9 per cent from 1917 to 1920, and 47.9 per cent from 1930 to 1933. The average of the three declines in real income from bond interest is 32.6 per cent, whereas the average of the three declines in real income from common stocks is 43.8 per cent. Furthermore, the real income from the bond investment declined by 47.8 per cent from \$6.91 in 1871 to \$3.61 in 1937, whereas the real income from the common-stock investment rose by 68.3 per cent from \$5.26 in 1871 to \$8.85 in 1937, although it fell off sharply in 1938.

A consideration of the average yield of the stocks of all corporations in relation to their average earnings-price ratio indicates the excess of earnings over dividend payments. An approximation of this figure for a given year is obtained by subtracting, for the year in question, the figure for Index $Y_{Ea}-1$ from that of Index $R-1$. From this it is found that, for the 68 years from 1871 to 1938, the average amount of earnings annually retained by corporations is 2.5 per cent of the value of their common stocks. As previously noted, all stocks on the average advanced in price at the rate of 1.8 per cent a year for the period under consideration. This means that every \$2.50 of earnings retained by a corporation has, on the average, been associated with an increase of \$1.80 in the value of its stock. Of course, a stockholder could have reinvested the dividends paid him so that \$2.50 so paid might have been utilized to increase the value of his stock

SOME IMPORTANT FACTS DISCLOSED BY THE INDEXES

holdings by \$2.50. At first glance, therefore, it would appear that, when corporations retained earnings to finance plant expansion, technological advances, or new enterprises, these earnings were, in general, invested less advantageously to the stockholder than if they had been turned over to him and he had used them to purchase additional stock. However, if all earnings had been paid to the stockholders, and all the recipients had attempted to apply these dividends to increase their holdings of outstanding stock, each would have found himself with the same amount of stock as before. One way of explaining the low return on retained earnings is to assume that an average annual reinvestment of about 0.70 of 1 per cent by corporations was necessary in order to provide a reserve against contingencies which had not, in general, been adequately taken care of in the various expenses charged on the corporations' books. For example, it is quite possible that corporations have not, in general, set up sufficient reserves against their chances of failure and that, for this reason, reported reinvested earnings of \$2.50 overstate the true earnings which, in reality, are \$1.80. Perhaps a more satisfactory explanation, however, is that during the last 68 years common stocks in the United States have in general sold at about 72 per cent of their true value; that is, their true value has been about 39 per cent higher than their market price. If stocks had been priced 39 per cent higher, the annual return, including cash dividends and appreciation in price, would have been about 5.4, instead of 6.8, per cent. With stock prices 39 per cent higher, the average amount of earnings retained by corporations would have been 1.8 per cent, instead of 2.5 per cent, of the market value of their stocks. This 1.8 per cent in earnings retained would then have been associated with an increase of an equal amount, 1.8 per cent, in the value of the stocks. Incidentally, a return of 5.4 per cent on stocks would still have been enough higher than the 4.2 to 4.6 per cent obtainable on high-grade bonds or commercial loans entirely to compensate for the speculative element of inconsistency in the performance of individual stocks.

It may be of interest to consider variations in yields and earnings-price ratios from decade to decade over the 65 years from 1871 to 1935. The years 1936 to 1938 are omitted because yields then are distorted by the influence of the undistributed-profits tax. For the All Stock index, which includes all industrials, railroads, and utilities, the average annual earnings-price ratio, yield, and excess of the former over the latter, are shown in Table 7.

It will be noted that the long-range trend of yields is nearly horizontal. The average of 5.30 per cent for the 20 years from 1871

COMMON-STOCK INDEXES

to 1890 was almost exactly repeated from 1911 to 1935 when an average yield of 5.31 per cent was recorded. The figures indicate no evidence that the return on common-stock investments has shown a long-range declining trend. In analyzing the record of earnings-

TABLE 7
COMPARISON OF YIELD AND EARNINGS-PRICE RATIO OF
ALL STOCK INDEX BY DECADES

Interval	Earnings-Price Ratio	Yield	Difference
	Per Cent	Per Cent	Per Cent
	R	Y _{Ea}	R - Y _{Ea}
1871-1880	8.92	5.95	2.97
1881-1890	6.24	4.65	1.59
1891-1900	6.21	3.95	2.26
1901-1910	7.51	4.24	3.27
1911-1920	10.33	5.76	4.57
1921-1930	8.12	5.11	3.01
1931-1935	3.23	4.82	-1.59
Average	7.53	4.93	2.60

price ratios, a similar picture is presented. The average ratio of 7.58 per cent prevailing for the 20 years from 1871 to 1890 is slightly lower than that for 1911-35 which is 8.03 per cent.

The median²¹ earnings-price ratio and median yield for the decade 1926-35 for 53 subgroups are compared in Table 8 with the percentage gain or loss in the average price of the stocks for this period. There are 9 industries for which the decline in the stock price index for the period exceeded 60 per cent, and 8 for which the gain exceeded 100 per cent.²² The market as a whole lost 6.4 per cent in the period under consideration. For the 10 years the average of yields for the 9 industries in which stock prices declined more than 60 per cent was 3.27 per cent and, for the 8 industries in which stock prices advanced more than 100 per cent, 3.48 per cent, whereas the yield for all stocks was 4.16 per cent. The average of earnings-price ratios for the 9 industries in which stock prices declined the most was 1.44 per cent, for the 8 industries in which stock prices advanced the most, 6.04 per cent, and for all stocks, 4.97 per cent. From the foregoing it

²¹ For these 53 subgroups the median earnings-price ratios and median yields are reported, because it was felt that too frequently a single extreme value distorted the arithmetic mean.

²² The selection of the percentages 60 and 100 is purely arbitrary, but was made because it affords a comparison between approximately equal numbers of subgroups.

appears, as would be expected, that earnings have more influence than dividend payments in the determination of stock prices.

An examination of the All Stock monthly index for yield expectations shows that four times in the last 68 years the expected yield has dropped below 3 per cent. These were in February–March–April, 1899, April, 1901, August–September, 1929, and July, 1933. Each of these four periods was a favorable one for the sale of stocks, since in each case lower prices developed in the next year. There have also been three cases where yield expectations rose above 8 per cent. These occurred in October, 1873, October–November–December, 1917, and

SOME IMPORTANT FACTS DISCLOSED BY THE INDEXES

April–May–June–July, 1932. In each of these three instances stock prices averaged higher in the subsequent 12 months. It would thus appear that, when average yields are below 3 per cent, stocks are priced too high, and when average yields are above 8 per cent, stock prices are too low.

Table 9 shows the records of the stock price indexes, Series C, including cash dividend payments, for different industrial groups. These are presented by decades, and also for various periods ending with 1938. It will be seen that the most profitable group to investors for the entire period from 1871 to 1938 was Miscellaneous Services with a return of 68,929 per cent. This group in the earlier years included principally express companies and more recently has included also finance companies. This apparently fabulous figure represents the gain if an investor had kept his funds continuously from 1871 to 1938 in the stocks included in this index, apportioned according to their monetary importance, and had reinvested in these stocks all cash income which he received. This represents an average return of 10.1 per cent at compound interest for each of the 68 years, which is only 1.5 per cent more than the average annual return of 8.6 per cent²³ on all industrial stocks for this period. The second most profitable group for the 68 years was Telephone and Telegraph with a gain of 25,564 per cent, or slightly over 8.5 per cent per annum. At the opposite extreme is Shipping and Shipbuilding with a shrinkage of 24 per cent, or 0.41 of 1 per cent a year.

Considering the period from 1891 to 1938, it is possible to include 7 additional industries which made their appearance in the quotations subsequent to 1871. One of these new groups, Electrical Equipment, proves to have been the most profitable for this later period, recording a return of 7,770 per cent in 48 years, or 9.5 per cent a year. The second most profitable for this period was Miscellaneous Services with a gain of 7,055 per cent or 9.3 per cent a year, and the least profitable was again Shipping and Shipbuilding with a shrinkage of 2 per cent, or 0.04 of 1 per cent a year.

For the 28 years from 1911 to 1938, there are 17 new industries added which had not appeared as early as 1891. One of these, Chemicals, proved to be the most profitable with a return of 6,389 per cent, or 16.1 per cent a year. The least profitable for this period was Fertilizer with a loss of about 66 per cent, or 3.8 per cent a year.

²³ This figure represents the annual rate of gain as computed between the two points in time, January, 1871 and December, 1938. For this reason it differs slightly from the annual rate of gain, 8.8 per cent, indicated by a least-squares first-degree parabola fitted to the logarithms of the Series C index of industrial stocks. See page 41, footnote 18.

Notes

The 1891-1900 period runs from January, 1891 to January, 1901, and similarly for the other periods, with the following exceptions:

- (a) Periods ending in 1938 run only to December of that year.
- (b) Miscellaneous Services is discontinued after June, 1937. The percentage gains for the various periods ending with June, 1937 are as follows: 1931-1937, 398.0; 1871-1937, 68929.0; 1891-1937, 7054.7; 1911-1937, 813.8.
- (c) Tobacco—Cigar Manufacturers begins in February, 1911, since there is no January figure.
- (d) Retail Trade—Tobacco Chains is discontinued after April, 1937. The percentage gain from 1931 to April, 1937 is -83.3.
- (e) Miscellaneous Manufacturing is discontinued after April, 1938. The percentage gains for the various periods ending with April, 1938 are as follows: 1931-1938, 78.2; 1891-1938, 1060.5; 1911-1938, 1463.2.

For the period 1871-1880, the percentage gains for the various indexes are as follows: All Stocks, 148.5; Industrials, 154.5; Railroads, 155.7; Utilities, 122.7; Coal, 95.3; Miscellaneous Services, 302.1; Shipping and Shipbuilding, 15.2; Mining and Smelting, 85.6; Utilities—Telephone and Telegraph, 373.6. For the period 1881-1890, the corresponding figures are: All Stocks, 21.0; Industrials, 107.3; Railroads, 17.4; Utilities, 50.8; Coal, -8.6; Miscellaneous Services, 139.9; Shipping and Shipbuilding, -32.8; Mining and Smelting, -70.3; Utilities—Telephone and Telegraph, 91.4; Railroad Equipment, 251.7.

Looking at the last eight years, 1931 to 1938, the biggest gain was recorded by Beverages. This group showed a return of 187 per cent, or 8.1 per cent a year. The second most profitable group for the last eight years was Rayon with a gain of 186 per cent, or 8.0 per cent a year, the least profitable being Coal—Anthracite with a shrinkage of 86 per cent, or 21.5 per cent a year.

It is evident from an inspection of the various charts which follow that conflicting forces have been at work during the last 13 years. Up to that time there was no evidence of a change in yields, earnings-price ratios, or in the trends of stock prices. From 1926 to

COMMON-STOCK INDEXES

1929 there occurred, particularly in industrial and public utility stock prices, a dizzy upsurge which carried them far above the levels usually prevailing in the past with regard to earnings and dividend payments. This was known as the "New Era" and the rise in prices which occurred was probably to some extent justified on the basis of the history of stocks for the preceding 60 years. During that period there is considerable evidence to support the conclusion that stocks in general sold at about three-quarters of their true value as measured by the return to the investor. However, in the last seven years increased taxation and other governmental controls have constituted factors unfavorable to the outlook for private owners of the means of production. These developments, to some degree at least, form a rational basis for the drastic downward revision in common-stock values which has taken place since 1929.

SERIES Y INDEXES

YIELD EXPECTATIONS

These figures are total expected annual dividend payments divided by total stock values for each month. In every case the dividend rate is that tacitly indicated or explicitly announced by the corporation. It may, or may not, equal payments actually made for any continuous 12-month period. For a fuller discussion see pages 15–16 of the Introduction.

SERIES Y_a INDEXES

YIELDS

These are total actual dividends paid in each calendar year divided by total stock values as represented by an average of the monthly values for the year. The yields as thus computed will in general not agree exactly with the yield expectations reported in the Series Y indexes. For comparison with Earnings-Price Ratios, the Series Y_{ea} indexes, found in Appendix IV, should be used. These give yields of the stocks for which earnings data are available.

SERIES D_a INDEXES

DIVIDEND PAYMENTS

The purpose of these indexes is to show fluctuations in dividend income. For any given year, the number here presented is the product of the corresponding item in Series Y_a and the average for the year in question of Series P. It represents at any specified time the rate of income in dollars which would be derived from an investment in dollars equivalent to the annual average of the Series P index. For comparison with earnings, in order to include the same list of stocks as Series E, it would be necessary to use a Series D_{Ea}, which could be computed by multiplying Series P_{Ea} and Y_{Ea} given in Appendixes III and IV.

SERIES R INDEXES

EARNINGS-PRICE RATIOS

These are total reported earnings in each calendar year divided by total stock values as represented by an average of the monthly values for the year. Earnings reports pertaining to the earlier years are not available on all stocks included in the Series P, C, Y, Y_a, and D_a indexes. Therefore, the Series R indexes are based on a smaller list of stocks for those years.

EARNINGS-PRICE RATIOS

SERIES E INDEXES EARNINGS

The purpose of these annual indexes is to show fluctuations in earnings. The figures here presented are the products of the corresponding items for Series R and Series P_{Ea} . Series P_{Ea} is presented in Appendix III, and is an annual price index based on those stocks for which earnings reports are available. Series E indexes represent at any specified time the rate of earnings in dollars which would be derived from an investment in dollars equivalent to the figure for the corresponding Series P_{Ea} index. For recent years the earnings records are substantially complete; the annual averages of the Series P indexes have therefore been used in computing the later figures of Series E, and for these years no P_{Ea}

APPENDIX I

UNITED STATES AND FOREIGN COMMON-STOCK INDEXES

UNITED STATES INDEXES

Annalist Index of Stock Market Leaders, Daily, 1927-. This is composed of stocks, selected because of a heavy normal volume of trading and consistent movement with the market; the list is changed from time to time as conditions require. Corrections are made for changes in capital structure. It is an arithmetic average of actual prices weighted by factors inversely proportional to their average monthly ranges (weights have been revised at irregular intervals); separate indexes are given for high, low, and last. Source: "The *Annalist* Index of Stock Market Leaders: A New Weighted Average," *Annalist*, Vol. 31, Jan. 6, 1928, pp. 3, 27; index published currently in *Annalist*.

Annalist Weighted Averages of Group Leaders, Daily, 1930-. These include indexes of 72 industrial stocks (with separate indexes for 21 groups), 10 rails, 8 utilities, and the total of 90 stocks; the original list included 33 industrials (in 10 groups), 5 rails, and 5 utilities, but was enlarged as of November 30, 1935. The stocks are selected according to their market importance, as judged "partly from the size of the company, partly from the activity of the issue over the past few years, partly from the general market behavior of the stock — whether its movements have in the past been consistent with the movements of other stocks in the group." Corrections are made for stock split-ups and stock dividends. Adjustments are made for rights "when their value is great enough to influence the index." The indexes are arithmetic averages of actual prices weighted by factors inversely proportional to the average annual range of each issue; separate indexes are given for high, low, and last; monthly averages of the industrials are also published. The industrial index continues the *Axe-Houghton Weighted Average of Industrial Stocks*. Source: Emerson Wirt Axe, "The *Annalist* Weighted Averages of Group Leaders," *Annalist*, Vol. 35, Mar. 14, 1930, pp. 596-597, 606-607; A. McB., "Financial Markets: *Annalist* Weighted Averages Revised and Enlarged," *Annalist*, Vol. 46, Dec. 20, 1935, p. 861; indexes published currently in *Annalist*.

Associated Press Averages, Daily, 1927-. These include separate indexes of 30 industrials, 15 railroads, 15 utilities, and the total of 60 stocks, selected on the basis of activity, representative character, and to some extent sensitivity. Corrections are made for changes in capital structure of 10 per cent or more. The indexes are unweighted arithmetic averages of actual prices. Source: correspondence; indexes published currently in many newspapers.

Axe-Houghton Weighted Average of Industrial Stocks, Monthly, 1883-1937. This is composed of 10 stocks down to 1914, 20 stocks from 1915 to December, 1925, and 30 stocks from January, 1926 to date, selected as representative market leaders. It is an arithmetic average of actual monthly high and low prices weighted by factors inversely proportional to the average annual range of each issue, new average ranges being taken at intervals of from 3 to 13 years. Corrections are made for changes in capital structure such as stock dividends and

COMMON-STOCK INDEXES

rights. Source: Emerson Wirt Axe and Ruth Houghton, "An Index of Industrial Stock Prices, 1883-1926," *Annalist*, Vol. 27, Apr. 30, 1936, pp. 614-616. Figures from 1883 to date may be obtained from H. M. Gartley, 76 William Street, New York City, or from E. W. Axe and Company, Inc., 730 Fifth Avenue New York City.

Axe-Houghton Adjusted Index of Industrial Stock Prices, Monthly, 1883-1937. This is the Axe-Houghton Weighted Average of Industrial Stocks with the influence of long-term trend removed. Source: Emerson Wirt Axe and Ruth Houghton, "The Stock Market as a General Business Forecaster; A Critical Examination of the Period 1884-1926," *Annalist*, Vol. 28, Aug. 13, 1926, pp. 204-206. Figures from 1883 to date may be obtained from H. M. Gartley, 76 William Street, New York City, or from E. W. Axe and Co., Inc., 730 Fifth Avenue, New York City.

Babson's Index of Representative Railroads, Annual, 1860-92. This is composed of from 3 to 10 railroad stocks "as representative as possible of the different sections of the country and the different classes of traffic for the period as a whole." A high and a low figure are given for each year; for 1860-76 these are the averages of all the highs and of all the lows, regardless of the day on which they occurred; for 1877-92 all high figures for a given year are taken as of the same date, and the lows for each year are determined in a similar manner. Source: Roger W. Babson, *Business Barometers*, 19th edition, Babson Park, 1928, pp. 41-51.

Barron's Averages, Monthly, 1906-20; Weekly, 1921-33. These include indexes of 40 industrials and of 30 rails, of a varying list, selected each week as having the highest ratio of shares traded to shares outstanding. They are aggregative indexes, computed by the Laspeyres formula, modified to employ a chain base, weighted by shares traded, and chained to Jan. 8, 1926 = 100. Changes in capital structure are allowed for by omitting in the week concerned stocks going "ex rights" or "ex stock dividends," and by excluding stocks of companies in the process of reorganization. Source: *The Dow-Jones Averages with an Explanation of the Dow Theory*; *The Barron's Averages*, 3rd edition, New York, Barron's, 1931; indexes were published in *Barron's* through Vol. 13, No. 12, Mar. 20, 1933.

Barron's 50-Stock Index (formerly called *Barron's Composite Stock*, until October 18, 1937), Weekly, 1932-, with less frequent figures back to 1929. This index is composed of 50 stocks selected for importance in industry, good diversification, and availability of quarterly reports. Revisions of the list discard stocks not showing earnings, since the index is designed primarily for evaluation on basis of earnings. It is corrected for changes in capital structure. The data for each stock are weighted in such a way that the average represents an equal dollar "investment" in each issue. In addition to the price index, figures are also given for earnings (similarly weighted), price-earnings ratios, earnings yields, bond yield, and ratio of bond yield to common-stock earnings yield. Source: *The Dow-Jones Averages*, 8th edition, New York, Barron's, 1937; index published currently in *Barron's*.

Boston News Bureau, 20 Mining Stocks, Daily, 1909-. This is a simple arithmetic average until May 22, 1929, after which date it is computed on a constant-divisor basis, with a number of changes in the divisor due to substitutions. Changes in the capital structure of a company are given consideration only when there is a split-up of the shares or a very substantial stock dividend. Source: corre-

UNITED STATES AND FOREIGN COMMON-STOCK INDEXES

spondence; daily closing average prices are published in *The Dow-Jones Averages*, 8th edition, New York, Barron's, 1937; index published currently in *Boston News Bureau* and in *Barron's*.

Brookmire Industrial Stock Price Average, Daily, 1900-31. This is composed of 20 stocks through 1924 and 30 thereafter, selected as leading issues. Corrections are made for all changes in capital structure. It is an unweighted arithmetic average of actual prices. Source: correspondence; index published in *Brookmire Forecaster* to March, 1930, and then in *Analyst* to June, 1931.

Clement-Burgess Index, Monthly, 1854-83. This is composed of from 4 to 9 stocks, chiefly leading railroads. Corrections are made "for all stock dividends in excess of 5 per cent, in the period following 1862, for which records were conveniently available." The index is an unweighted arithmetic mean of actual prices. Source: Charles P. Burgess, "Clement-Burgess Stock Market Average Carries the Record Back to 1854," *Analyst*, Vol. 40, Oct. 28, 1932, pp. 579-580.

Cleveland Trust Company Indexes. The Cleveland Trust Company has computed and published in graphic form in its monthly *Business Bulletin* a number of different indexes; numerical data are not published. These indexes are listed below, with the date of publication in parentheses; except where noted, they are monthly unweighted arithmetic averages of monthly means of high and low actual prices for each issue: 1911-20, 10 Cleveland industrials, average of last quotation of each month as per cent of par (Mar., 1921); 1900-21, 25 industrials (June, 1921); 1900-22, 12 industrials (Nov., 1922); 1900-23, 24 industrials (12 common and 12 preferred), expressed as percentage deviation from normal (July, 1923); 1887-1901, 10 rails and 10 industrials, expressed both as average of actual prices and as percentage deviation from normal (Sept., 1923); 1902-23, 24 industrials, expressed both as average of actual prices and as percentage deviation from normal (Sept., 1923); 1900-24, 10 industrials (Mar., 1924); 1892-1924, 24 industrials (July, 1924); 1919-25, 9 automobile stocks, annual range of aggregate value of outstanding shares (Oct., 1925); 1900-26, all dividend-paying industrials listed on New York Stock Exchange (Mar., 1926); 1900-26, the same, expressed as multiples of dividend paid (June, 1926); 1900-26, the same, expressed as multiples of dividend and corrected for a normal based on reciprocal of bond yields (Dec., 1926); 1915-27, 20 industrials, expressed as average of actual prices and also with allowances for split-ups (Apr., 1927); 1921-27, 10 biggest industrials in 10 leading industries, average of monthly relatives, 1921 = 100, corrected for split-ups (May, 1927); 1921-27, 10 next biggest industrials in same industries as above, computed in same way (May, 1927); 1900-27, 15 dividend-paying rails, each quotation expressed in terms of \$100 par value and \$5 dividend, corrected for rights and split-ups (June, 1927); Jan.-July, 1927, 10 industrials, high and low of hourly average for each day, also weekly and monthly average (Aug., 1927); Daily, Jan.-Aug., 1927, all issues traded on New York Stock Exchange, excess of number of stocks advancing over those declining (Sept., 1927); 1925-28, 30 most active stocks on New York Stock Exchange, monthly yields capitalized at 5 per cent (Mar., 1928); 1900-27, 100 leading industrials of preceding 3 years, computed in same way (Mar., 1928); 1900-27, 15 leading railroads, computed in same way (Mar., 1928); 1921-29, 33 leading railroads, with 1921 = 100 (Sept., 1929); Jan.-Sept., 1929, per cent of all stocks traded on New York Stock Exchange that moved up or down each month (Oct., 1929); 1900-30, all dividend-paying stocks listed on New York Stock Exchange, prices as multiples of dividends (Apr., 1930, June, 1935); 1900-30, 25 leading industrials, rail-

COMMON-STOCK INDEXES

roads, and utilities, aggregative weighted by shares outstanding, with 1924 = 100 (June, 1930); 1831-1934, railroads, using indexes compiled by other agencies for period prior to 1880 (Jan., 1934). Source: *Cleveland Trust Company Business Bulletins*, *loc. cit.*, and correspondence.

Cole and Frickey, Indexes of Railroad Stock Prices, Monthly, 1834-66. These are composed of railroad stocks for which series of quotations covering most of the period were available; from 27 such series selections were made after eliminating those which showed little movement when the typical movement was one of appreciably cyclical quality, or which showed erratic movement bearing no close relationship to the general swings as indicated by most of the series. There are several different indexes, all of them unweighted geometric averages of actual prices reduced to 1853 = 100, except as noted: I. 1834-52, 8 stocks; IIA. 1853-66, 8 stocks tending downward; IIB. 1853-66, 10 stocks holding up till 1857; IIC. 1853-66, combination of IIA and IIB. III. 1834-66, 5 New England roads; IV. 1834-66, 8 Central Atlantic roads; V. 1853-66, 5 Western roads. There is also a chained geometric average of link relatives for all stocks, 1834-66. In addition, indexes I, IIC, and other indexes are converted to a new base to make a continuous series with the Dow-Jones index of 20 railroad stocks. Source: Arthur H. Cole and Edwin Frickey, "The Course of Stock Prices, 1825-1866," *Review of Economic Statistics*, Vol. 10, 1928, pp. 117-139.

Commons and Stone, Index Numbers of Railroad Stocks, Annual, 1878-1901. This is composed of 28 railroad stocks, including certain express and telegraph companies. It is an unweighted average of relatives. Source: *Final Report of the Industrial Commission, 1902*, Vol. 19, pp. 28-34 and 1101-04.

Cover and others, Barometer of Chicago Stock Prices, Monthly, 1915-29. This is composed of 12 representative Chicago industrial stocks. Corrections are made for all changes in capital structure, trend and seasonal are removed, and "the remaining cyclical movements, in units of their respective standard deviations, were averaged synchronously to form the composite." Source: John H. Cover, David A. Revzan, Wilfrid M. Helms, and Vincent J. Cohenour, "A Barometer of Chicago Stock Prices," *Journal of Business of the University of Chicago*, Vol. 3, Apr., 1930, pp. 171-191.

Dow-Jones Averages, Industrials and Rails, Daily, 1897-; Utilities, Daily, 1929-; Composite, Daily, Nov., 1933-; Hourly (all indexes), 1932-. These include indexes of 30 industrials (12 to 1926, 20 to 1928), 20 rails, and 20 utilities, and a composite of the 70 stocks. They are composed of active representative stocks, and their composition is changed when conditions necessitate. Up to 1928 corrections were made for split-ups and stock dividends of 100 per cent or more by multiplying the new price of a stock by an appropriate factor or by substituting another stock. Since September 10, 1928, instead of dividing the total of the stock prices (some of them multiplied by an adjusting factor) by the number of stocks, the total of prices without any multiples has been divided by a divisor which gave the same average as the old method for the transition date. The divisor is held constant "until some stock in the list . . . is split or reduced materially in price by a stock dividend, or until a substitution is made in the list of stocks." The averages, as described above, are unweighted arithmetic averages of actual prices; separate indexes are given for open, high, low, and last; weekly and monthly averages are also given. *Barron's* also gives weekly yield on each group. Source: *The Dow-Jones Averages*, 8th edition, New York, Barron's, 1937; indexes published currently in *Wall Street Journal*, *Barron's*, and the *Annalist*, monthly high

UNITED STATES AND FOREIGN COMMON-STOCK INDEXES

and low published currently in *Standard Trade and Securities*, Current Statistics Section, and in *Survey of Current Business*.

Electrical World Prices of Power and Light Common Stocks, Weekly, 1926-. This is composed of 37 representative power and light stocks, about equally divided between operating and holding companies. Corrections are made for split-ups by multiplying the price by the split-up ratio; no corrections are made for stock dividends or rights. It is an unweighted average of actual prices. Source: correspondence; index published currently in *Electrical World*.

Federal Reserve Bank of New York Average Prices of Industrial Stocks, Monthly, 1872-96. This is based on 10 stocks representing the Dow-Jones list with substitutions where necessary. No corrections are made for stock dividends or rights which "were comparatively rare and usually of small amounts previous to 1898." It is an unweighted arithmetic average of high and low actual prices. Source: correspondence from Federal Reserve Bank of New York quoted in Ada M. Matthews, "New York Bank Clearings and Stock Prices, 1866-1914," *Review of Economic Statistics*, Vol. 8, 1926, p. 192.

Irving Fisher's Index, Monthly, 1925; Weekly, 1926-36. This index is composed of the 224 industrial stocks showing the highest value of sales (prices \times shares sold) during the week; these usually account for about 60 per cent of the total value of transactions. Separate indexes are published for 18 industrial groups and for investment trusts (10 stocks), utilities (27 stocks), and railroads (25 stocks). The index is computed by Fisher's "ideal" formula, weighted by shares sold, and "chained" to January, 1925 = 100. Source: Irving Fisher, "New Index Numbers of Stock Sales and Prices," *Annalist*, Vol. 27, Jan. 15, 1926, pp. 117, 118, 121; Charles Amos Dice, *The Stock Market*, New York, A. W. Shaw Co., 1927, pp. 471-475; index was published currently in *Springfield Republican* and other newspapers.

Frickey, Index of Industrial Stock Prices, Monthly, 1902-21. This index is composed of the 20 largest industrials for which data are complete and without serious discontinuities caused by stock dividends. Separate indexes are given for a group of 8 iron and steel stocks and for the remaining group of 12 stocks. The data are corrected for all changes in capital structure. The index is found by taking unweighted geometric means of actual prices; these means are then reduced to percentages of their geometric average, 1909-13 = 100. Source: Edwin Frickey, "An Index of Industrial Stock Prices," *Review of Economic Statistics*, Vol. 3, Aug., 1921, pp. 264-277.

Hammerslag, Borg and Co. Indexes, Weekly, 1929-1930; Daily 1930-. These are composed of 587 industrials, 53 rails, 47 utilities, and the total of 687 stocks. They represent "substantially all the common stocks listed on the New York Stock Exchange enjoying a reasonable measure of activity. Adjustments are made for substitutions and split-ups; also for stock dividends when they are of such magnitude as to call for a correction. It has not been our practice to make adjustments for price changes resulting from rights or from stocks going ex dividend, because they generally involve changes much too small to have any influence on an average as broad as ours." The indexes are unweighted averages of actual prices. Source: correspondence; indexes published currently in *Journal of Commerce*.

Index Number Institute Indexes, Monthly, 1926-28; Weekly, Jan-Feb., 1929; Daily, Mar., 1929-1930. These include indexes of 210 industrials (with separate indexes for 21 groups), 25 rails, 25 utilities, 10 investment trusts, 40 banks, and

COMMON-STOCK INDEXES

65 insurance companies. The stocks are selected to include about 90 per cent of the total value of all stocks in each group and the value of the selected stocks for each group is prorated upwards, before being included in the total industrial index, to equal the total value of all stocks in the group; the selection is revised every three months, or when necessitated by capital changes, for all of which corrections are made. The index is computed by Irving Fisher's "ideal" formula, weighted by shares outstanding, and is "chained." Source: correspondence.

Investment Managers Company Appraisal of the Market Value of Industrial Equities, 1901-26, and *Boettler's Index*, Monthly, 1927-29. These two indexes are composed of 20 industrial stocks to 1914 and of 25 thereafter of "companies which appeared to be outstanding in their respective industries in the year 1926." Corrections for stock dividends and split-ups are taken care of annually by the formula used; rights are assumed to be sold for cash which is reinvested in the entire list at the end of the year. The indexes represent an original investment of \$20,000 redivided equally among the stocks on the basis of market value at the end of each year. Source: Edgar Lawrence Smith, "Market Value of Industrial Equities," *Review of Economic Statistics*, Vol. 9, 1927, pp. 37-40; Herbert F. Boettler, "Post-war Trends of Stock Prices almost Parallel to Earnings and Dividends," *Annalist*, Vol. 35, Apr. 25, 1930, pp. 907-909.

Magazine of Wall Street's Common-Stock Price Index, Weekly, 1926-. This is composed of about 300 stocks, including all stocks listed on the New York Stock Exchange with an annual volume of 500,000 shares or more. Corrections are made for all changes in capital structure. The index is an unweighted arithmetic average of relative prices with 1925 closings equal to 100. Source: correspondence; index published currently in *Magazine of Wall Street*.

Matthews, Index Numbers of the Prices of 10 Railroad Common Stocks, Monthly, 1881-97. This is composed of 10 railroad stocks, selected from 32 series with substantially complete monthly quotations. Stocks showing great irregularities have been rejected, and the final selection has been made on the basis of resemblance to a preliminary annual aggregate index (based upon 16 stocks), representation of railroad interests, and geographical distribution. Corrections are made for stock dividends; occasional missing quotations are filled in by geometrical interpolation. The index is computed by taking unweighted geometric means of monthly prices after adjustments and interpolation have been completed, and reducing these geometric means to relatives of their arithmetic average for 1881-97. Source: Ada M. Matthews, "New York Bank Clearings and Stock Prices, 1866-1914," *Review of Economic Statistics*, Vol. 8, 1926, pp. 193-198.

Mitchell, Indexes of American Transportation Stocks, Monthly, Quarterly, Annual, 1890-1915. These are composed of 40 stocks, including 35 railroads and 5 express, steamship, and telegraph companies, which had approximately complete and regular records for the period. Two important companies were omitted because stock dividends broke the continuity of quotations. "Stock dividends which did not force quotations suddenly to a lower level, and the payment of assessments that did not raise quotations suddenly to a higher level, . . . have been disregarded." Monthly indexes are also given for a group of dividend-paying railroads. Annual indexes are given for 3 price groups, for 6 geographical divisions of railroads, and for the nonrailroad stocks. These indexes are unweighted arithmetic means of relative prices, with 1890-99 = 100. In addition 6 annual indexes are given, computed by different formulas applied to actual prices: un-

UNITED STATES AND FOREIGN COMMON-STOCK INDEXES

weighted geometric mean, unweighted median, unweighted arithmetic mean, arithmetic mean weighted by shares outstanding, arithmetic mean weighted by earnings, and arithmetic mean weighted by shares sold. There are also 12 other annual indexes, computed by the above 6 types of formulas applied to prices relative to the preceding year and to prices relative to a fixed base of 1890-99 = 100. Finally there are 3 other annual indexes: the median of percentages of rise or fall, the arithmetic mean of the same, and the median of relative prices of each stock with 1890-99 = 100. Source: Wesley C. Mitchell, "The Prices of American Stocks: 1890-1909," *Journal of Political Economy*, Vol. 18, 1910, pp. 345-380; "The Price of Preferred and Common Stocks: 1890-1909," *ibid.*, Vol. 18, 1910, pp. 513-524; "Rates of Interest and the Prices of Investment Securities: 1890-1909," *ibid.*, Vol. 19, 1911, pp. 269-308; "Security Prices and Interest Rates in 1910-12," *ibid.*, Vol. 21, 1913, pp. 500-522; "American Security Prices and Interest Rates," *ibid.*, Vol. 24, 1916, pp. 126-157; "A Critique of Index Numbers of the Prices of Stocks," *ibid.*, Vol. 24, 1916, pp. 625-693.

Moody's Indexes of Common-Stock Prices, Monthly, 1926-29; Weekly, Jan., 1930-Apr., 1931, Jan., 1936—; Daily, Apr. 15, 1931—Dec 15, 1935. These include indexes of 60 industrials, 20 rails, 20 utilities, and the whole 100 stocks. The 1926 base price of each stock has been adjusted from time to time for stock splits, rights, and all stock dividends except those so small that they had virtually no effect on the current price. The indexes are unweighted arithmetic averages of relative prices, with 1926 = 100. Source: correspondence with Moody's Investors Service; indexes were published currently in *Moody's Investment Survey*, Apr. 25, 1932 to Dec. 30, 1935.

Moody's Stock Dividend Rate, Monthly, 1929-. This is the average annual dividend rate per share on 600 stocks, of which 561 are listed on the New York Stock Exchange, the remainder being unlisted bank and insurance stocks. Both dividend-paying and nondividend-paying stocks are included, the former making up about 80 per cent of the total number of stocks when the index was started in June, 1929. The index is a weighted average, found by computing each month the total annual dividend in dollars for each stock on the basis of the most recently announced rate, and dividing the aggregate dollar dividends for all stocks by the aggregate number of shares outstanding during the month. Extra dividends are included when paid at uniform intervals; where they are paid irregularly, the annual rate is computed on the basis of the amount actually paid during the preceding 12 months. The number of shares is adjusted for changes in capital structure. In addition to the monthly index for all stocks, quarterly indexes are computed for 29 groups. Source: *Moody's Investors Service*, 23rd Year, No. 53, Dec. 14, 1931, pp. W192-W194; and correspondence; index published currently in *Moody's Stock Survey*.

Moody's Weighted Average Yield, Monthly, 1929-. This is composed of 125 industrials, 25 railroads, and 25 utilities, all listed on the New York Stock Exchange, and 15 unlisted large banks and 10 unlisted large insurance companies. The index is the ratio of aggregate dollar dividends, at current annual rates, to aggregate market value, at current prices. Only cash dividends are included; extra dividends are included as part of the annual rate when paid at uniform intervals; when extras are paid irregularly, the annual rate is computed on the basis of the amount actually paid during the preceding 12 months. Source: correspondence; index published currently in *Moody's Stock Survey*.

National Barometer of Stock Quotations, Monthly, 1900-27. This is composed

COMMON-STOCK INDEXES

of 10 leading representative stocks. Corrections are made for all changes in capital structure. Trend and seasonal are removed from each component issue, and each series is expressed in terms of its standard deviation; a simple arithmetic average of these figures is the index. Source: *University of Denver Business Review*, Vol. 3, No. 5, May, 1927.

New York Herald Tribune Averages, Daily, 1923-. These include indexes of 70 industrials (with 9 group indexes), of 30 railroads (with 2 group indexes), and of the composite of 100 stocks. Separate indexes are given for high, low, and close. Adjustments are made for important changes in capital structure. The indexes are unweighted arithmetic averages of actual prices. Source: *The New York Herald Tribune Market Averages*, 5th edition, reprinted from the *New York Herald Tribune*, 1931; C. A. Dice, *The Stock Market*, New York, A. W. Shaw Co., 1927, pp. 464-467; indexes published currently in *New York Herald Tribune*.

New York Herald Tribune Curb Averages, Daily, August, 1929-. This is composed of 25 representative stocks quoted on the New York Curb Exchange. Corrections are made for changes in capital structure. The indexes are arithmetic averages of actual prices. Separate indexes are given for high, low, and close; also weekly high and low. Source: indexes published currently in *New York Herald Tribune*.

New York Stock Exchange Bulletin Indexes, Monthly, 1925-. These are composed of all listed stocks. Four separate indexes are computed: 1. *Flat Average Price*: An unweighted arithmetic average of generally the closing bid prices of all listed shares established in the last day's market of each month and prevailing up to the opening of the first day's market of the succeeding month. 2. *Stock Price Index, Jan. 1, 1925 = 100*: To compensate for the effects of split-ups, split-downs, stock dividends, and distributions, and for special exchanges or substitutions of stocks as a result of reorganizations or mergers, appropriate adjustments are made each month in the total number of shares listed. The adjusted listings are divided into the total market value of all listed shares (cf. Index 4) to compute the adjusted average price of all listed shares; this is expressed as an index with Jan. 1, 1925 = 100. 3. *Stock Clearing Corporation Monthly Average Price of Settled Shares*: This monthly average price results from dividing the total settlement money values of all shares settled during the month through the Day Branch of Stock Clearing Corporation by the number of such shares settled. 4. *Unadjusted Average Price*: Three composite series of such average prices are computed—for all listed common, preferred, and total stocks—and these price averages are weighted by the sizes of the share issues. Using the closing bid prices (cf. Index 1), the market value of each issue is computed by multiplying its price by the number of shares listed on the same day the closing bid price is taken off. The market values of the included stocks and their number of shares listed are aggregated; and the unadjusted average price is the aggregate market value divided by the aggregate listings. This index is also given for 33 groups and 59 subgroups of stocks. Source: correspondence; indexes published currently in *New York Stock Exchange Bulletin*.

New York Times Averages, Daily, Weekly, Monthly, and Annual Range, 1911-. These include indexes of 25 industrials, 25 railroads, and the composite of 50 stocks. Small changes in capital structure are ignored but, where there are large changes because of stock dividends and split-ups, adjustments are made by means of substitutions or the multiplication of the price of the old stock in proportion to the new stock increase. The indexes are unweighted arithmetic aver-

UNITED STATES AND FOREIGN COMMON-STOCK INDEXES

ages of actual prices. Source: C. A. Dice, *The Stock Market*, New York, A. W. Shaw, 1927, pp. 462-464; indexes published currently in the *New York Times* and the *Analyst*; monthly averages published currently in *Standard Trade and Securities*, Current Statistics section, and *Survey of Current Business*.

New York Trust Company Index of Security Prices, Monthly, 1920-36. This is composed of 103 industrial, railroad, and public utility stocks which were representative at the time the index was first compiled. Corrections are made for split-ups and sizable stock dividends. It is an unweighted arithmetic average of actual prices. Source: correspondence with New York Trust Company; index was published in *The Index* of the New York Trust Company until August, 1936.

Owens and Hardy, Indexes of Prices of Highly Speculative and Investment Common Stocks, Monthly, 1919-24. These are composed respectively of 10 non-dividend-paying (with some exceptions) and 10 dividend-paying stocks. One correction is made where necessary for a stock dividend. The indexes are unweighted arithmetic averages of relatives, with 1919-23 = 100. Source: Richard N. Owens and Charles O. Hardy, *Interest Rates and Stock Speculation*, 2nd edition, Washington, Brookings Institution, 1930.

Persons, Tuttle, and Frickey, Index Numbers of Prices of Ten Railroad Common Stocks, Monthly, 1866-80. This is composed of 10 railroad stocks, selected from 19 series of substantially complete monthly prices, by rejecting 2 for which "large stock dividends caused sudden and decided breaks in their quotations," and 7 which "displayed erratic movements quite dissimilar to the general tendency." The index is computed by taking geometric means of actual prices, and reducing the monthly geometric means to relatives of their arithmetic average 1866-80 = 100. Source: Warren M. Persons, Pierson M. Tuttle, and Edwin Frickey, "Business and Financial Conditions Following the Civil War in the United States," *Review of Economic Statistics*, Vol. 2, July, 1920, Supplement, pp. 33-37.

Rocky Mountain Stock Index, Monthly, 1915-26. This is composed of 4 Rocky Mountain stocks. Trend and seasonal are removed from each component issue, and each series is expressed in terms of its standard deviation; a simple arithmetic average of these figures is the index. Corrections are made for all changes in capital structure. Source: *University of Denver Business Review*, Vol. 2, No. 7, Sept., 1926.

Rose, Indexes of Investment Experience, Semi-annual, 1901-. These are composed of the stocks of the changing Dow-Jones industrial, railroad, and public utility (1929-) lists. For each list 4 indexes are constructed; all of them in effect redistribute an original investment equally among the component stocks on the basis of market value at the end of each six months. Index A is calculated by taking an arithmetic mean of the market appreciation (or depreciation) (including value of rights and stock dividends) during the period and increasing (or diminishing) by this percentage the value at the beginning of the period; it is an index of stock value. Index D is calculated similarly except that cash income is added to market appreciation; this index represents the result of reinvestment of dividends. Indexes B and C are similar to D, except that the "riskless rate" of interest is subtracted, in the case of B figured on the current market value and in the case of C figured on the original capital; these indexes show the gain (or loss) of a stock investment as compared to a "riskless investment." Source: Dwight C. Rose, *A Scientific Approach to Investment Management*, New York, Harpers, 1928, pp. 123-169, 370-385; *The Practical Application of Invest-*

COMMON-STOCK INDEXES

ment Management, New York, Harpers, 1933, pp. 217-246, carries the indexes through 1932; the indexes are computed currently by the author.

Smith's Tests of Common Stocks as Long-Term Investments, Various periods, 1866-1922. These consist of a computation of the total cash income each year, including proceeds of sale of rights and fractional shares received as stock dividends, from an original investment of \$10,000 divided as nearly equally as possible among 10 different stocks; in addition the principal, including whole shares received as stock dividends, is revalued at one intermediate date and at the end of the period. This method is applied to 12 different groups of stocks for varying periods, as follows: 1. 1901-22, stocks in which the greatest volume of transactions occurred in the first full week of 1901; 2. 1901-22, stocks showing highest yield in January, 1901, selected from the 19 showing the most consistent dividend record, 1897-1900; 3. 1901-22, stocks showing most transactions in the week of January 12, 1901 in each of 10 industries; 4. 1880-99, 5 rails showing highest dividend yield in first week of 1880 out of 15 showing most transactions, and 5 miscellaneous showing highest dividend yield; 5. 1866-85, a list of the 10 largest companies in 5 industries assumed to have been selected by a hypothetical investor who "lived in Boston in the year 1866 and was subject to the influences of the Boston financial psychology of the time"; 6. 1866-85, the next 10 largest companies after those in Test 5; 7. 1892-1911, one or two stocks from each industry, selected, on the basis of regularity of dividend payments for 3 to 5 years, from railroad and industrial stocks having the largest capitalization in 1892; 8. 1906-22, the largest companies in a diversified list of industries; 8a. 1906-22, the same as Test 8, with the substitution for 2 nondividend-paying stocks of the next largest dividend-paying ones; 9. 1901-22, railroads with the largest amount of stock outstanding; 10. 1901-22, dividend-paying railroads with the largest amount of stock outstanding; 11. 1901-22, nondividend-paying railroads with the largest amount of stock outstanding. In addition a chart is given showing the annual income yield on current market value of common stocks from 1866 to 1922, using the data of tests 5, 4, 7, and 3. Another chart gives movement in the annual market value of a composite holding of common stock from 1837 to 1923, using 7 stocks for the period 1837-66, then the stocks of tests 5, 4, 7, and 3 for successive periods. Source: Edgar Lawrence Smith, *Common Stocks as Long Term Investments*, New York, Macmillan, 1926.

Standard Statistics Daily Stock Price Indexes, Daily, 1928-. These include indexes of 50 industrials, 20 railroads, and 20 utilities, and a composite index of the 90 stocks, in which these groups are weighted 2, 1, and 2 respectively. The 50 industrial stocks reflect approximately the importance of industrial groups in the weekly index representing 27 of the more important lines of business. Separate indexes are given for high, low, and close; monthly high, low, and average of daily closings are also given. Corrections are made for all changes in capital structure. The indexes are base-weighted aggregatives, the price of each issue being weighted by the number of shares outstanding. The base year is 1926 = 100. (For a more complete discussion of the construction of Standard Statistics indexes, see pp. 25-30). Source: correspondence: *Standard Trade and Securities*, Vol. 80, No. 26, May 29, 1936, Section 6, pp. C2-C20; indexes published currently in *ibid.*, Current Statistics section, monthly; in *New York Stock Exchange Bulletin*; and in over 250 American newspapers.

Standard Statistics Dividend Yield on Common Stocks, Weekly, 1926-35. Yields are given for 50 industrials, 20 railroads, 20 public utilities, and the com-

UNITED STATES AND FOREIGN COMMON-STOCK INDEXES

posite of 90 stocks, the same list as used in Standard Statistics Daily Stock Price Indexes. The current annual dividend rate (in dollars) for each stock is multiplied by the number of shares outstanding and the products added. The Wednesday's closing market price of each stock is multiplied by the number of shares outstanding and the products added. The total dividends divided by the total market value, expressed in per cent, is the yield. "Extra dividends are added to the regular dividend and continued for the period of a year. Extra quarterly and semi-annual dividends, unless specific announcement is made, are put on an annual basis at their second appearance. If regular dividends are increased, extra dividends paid during the preceding year are usually disregarded." Source: *Standard Trade and Securities*, Base Book section, 1932, p. 121.

Standard Statistics Financial Company Indexes, Various periods. These indexes are not included in the All Stock Index of the regular weekly series, but cover financial companies whose stocks are not, in general, quoted on the New York Stock Exchange. The separate indexes are: New York City Banks, 19 stocks, Monthly, 1918-28, Weekly, 1929-; Fire Insurance, 18 stocks, Monthly 1918-28, Weekly, 1929-; Casualty and Surety Insurance, 10 stocks, Weekly, 1926-; Investment Trusts, 18 stocks, Monthly, 1926-28, Weekly, 1929-; Investment Trusts, leverage companies, 9 stocks, Weekly, July, 1929-; Investment Trusts, nonleverage companies, 9 stocks, Weekly, July, 1929-; Finance Companies, 5 stocks, Weekly, 1926-. The monthly averages are computed from first-of-the-month bid prices; the weekly averages from Wednesday's bid prices; monthly averages of the 4 or 5 weeks are also given. Corrections are made for all changes in capital structure. The indexes are base-weighted aggregatives, the price of each issue being weighted by the number of shares outstanding. The base year is 1926 = 100. (For a more complete discussion of the construction of Standard Statistics indexes, see pp. 25-30). Source, correspondence; *Standard Trade and Securities*, Vol. 80, No. 26, May 29, 1936, Section 5, pp. B98-B102; indexes published currently in *ibid.*, Current Statistics section, monthly; monthly averages of Bank and Fire Insurance indexes published currently in *Survey of Current Business*.

Standard Statistics Hourly Stock Price Index, Hourly, Dec. 23, 1931-June 25, 1932. This index is composed of the 90 stocks of the Standard Statistics Daily Stock Price Indexes. It is computed for 6 times each day: Open, 11 A.M., 12 M., 1 P.M., 2 P.M., and Close. The index is a base-weighted aggregative, the price of each issue being weighted by the number of shares outstanding. The base year is 1926 = 100. (For a more complete discussion of the construction of Standard Statistics indexes, see pp. 25-30). Source: correspondence.

Standard Statistics Index of Industrial Common-Stock Yields, Monthly, 1914-28. This is composed of 33 stocks which paid some dividend every year during the period. The index is computed by dividing the total annual dividend on all the stocks, figured at the rate assumed to be in effect in the month concerned, by the total market value of all the stocks, and is expressed in per cent. Extra cash dividends, on an annual basis, are added to regular dividends and considered to be part of such regular dividend rate until announcement of a revised dividend policy is made. Source: *Standard Trade and Securities*, Base Book section, 1932, p. 119.

Standard Statistics Monthly Stock Price Indexes, Monthly: Railroads, 1885-; Industrials and Composite, 1900-; Utilities, 1905-. These include indexes of 20 rails, 50 industrials, 20 utilities, and the composite of 90 stocks, selected when

COMMON-STOCK INDEXES

the index was computed in 1934 to provide about the same degree of representation as in the more comprehensive weekly index; as the index was carried back to earlier years, the number of available stocks decreased and in 1900 the industrial index was composed of only 39 stocks, which included most of the active ones. Prior to 1936 monthly data are averages of highs and lows; thereafter they are averages of Standard Statistics Daily Stock Price Index. Corrections are made for all changes in capital structure. The indexes are base-weighted aggregatives, weighted by shares outstanding. The base year is 1926 = 100. (For a more complete discussion of the construction of Standard Statistics indexes, see pp. 25-30). The industrial index has also been carried back to 1883 by adjusting to its base the values of the Axe-Houghton Industrial Stock Price Index (1883-96) and the Dow-Jones Daily Industrial Averages (1897-99). Source: correspondence; *Standard Trade and Securities*, Vol. 80, No. 26, May 29, 1936, Section 5, pp. B3-B5, B103; indexes published currently in *ibid.*, Current Statistics section, monthly.

Standard Statistics Weekly Stock Price Indexes, Weekly, 1918- (some groups begin in 1926 or later). These include indexes of industrials, rails, utilities, and all stocks, together with 66* other group and subgroup indexes, and in 1937 were composed of 419 stocks. The indexes were first issued in 1923, carried back to 1918; in 1928 they were completely revised, to the base 1926 = 100; the coverage has increased from 198 stocks in 32 groups in 1918, as new groups and new stocks have been added from time to time. The stocks are selected to include from 70 to 100 per cent of the total market value of each group; in the aggregate they include about 90 per cent of the total value of stocks listed on the New York Stock Exchange, as well as some stocks listed only elsewhere. The weekly indexes are made from Wednesday's closing prices or the last preceding sale price; monthly averages of the 4 or 5 weeks are also given. In addition, weekly and monthly high and low are given from 1931. Corrections are made for all changes in capital structure. The indexes are base-weighted aggregatives, the price of each issue being weighted by the number of shares outstanding. The base year is 1926 = 100. (For a more complete discussion of the construction of Standard Statistics indexes, see pp. 25-30). Source: correspondence; *Standard Trade and Securities*, Vol. 80, No. 26, May 29, 1936, Section 5, pp. B3-B97; indexes published currently in *ibid.*, Current Statistics section, monthly; monthly averages of industrials, rails, utilities, and all stocks published currently in *Survey of Current Business* and *Federal Reserve Bulletin*; weekly indexes or monthly averages are also published currently in seven American daily newspapers and in several European periodicals.

FOREIGN INDEXES

AUSTRIA, *Österreichisches Institut für Konjunkturforschung*, Monthly, 1923-38. This index is composed of 34 of the most important stocks quoted on the Vienna bourse. Corrections are made for changes in capital structure. The index is an arithmetic average of relative prices with 1923-32 = 100. Source: correspondence; index published formerly in *Monthly Bulletin of Statistics of the League of Nations*.

*This figure includes two group indexes, Capital Goods and Consumers' Goods, which were added by Standard Statistics in 1937 and are not included in the Cowles Commission Indexes; it does not include a Coal index, combining Anthracite and Bituminous, which is included in the Cowles Commission Indexes. Thus the Standard Statistics Indexes total 70 and the Cowles Commission Indexes total 69; of these 68 are common to both.

UNITED STATES AND FOREIGN COMMON-STOCK INDEXES

BELGIUM, *National Bank*, Annual and Monthly, 1928-. These indexes cover 12 groups and the total, and are computed as follows: (1) The annual index, for the first business day of each year, includes all companies with no capital change during the preceding year and with quotations for that date. Each index is found by taking the ratio of the total value of the group on the first business day of the year (Σpq , where p is the price per share and q the number of shares outstanding) to the total value on the first business day of the preceding year; these link ratios then are chained. (2) The monthly indexes are based on 10 representative stocks in each group, and are chained arithmetic means of link relatives to the preceding month. The all-stock index is the arithmetic mean of the group indexes, each weighted by the latest annual value of the group. Stocks which show any change in capital structure are excluded for the month concerned. The monthly indexes are adjusted at the end of each year to correspond with the annual indexes. Source: Banque Nationale de Belgique, *Bulletin d'Information et de Documentation*, Numero special, Apr., 1929, pp. 31-32; and correspondence; monthly all-stock index published currently in *Monthly Bulletin of Statistics* of the League of Nations.

CANADA, *Dominion Bureau of Statistics*, Monthly and Weekly, 1926-, Daily, 1937-. This index is composed of 96 stocks, with separate indexes of industrials (with 9 group indexes), utilities (with 3 group indexes), and banks. Corrections are made for changes in capital structure. It is an aggregative index, weighted by shares outstanding, with 1926 = 100. Source: correspondence; index published currently in *Investors' Index Numbers of Security Prices*, Department of Trade and Commerce, Dominion Bureau of Statistics; monthly figure, reduced to 1929 = 100, published currently in *Monthly Bulletin of Statistics* of the League of Nations.

CHILE, Monthly, 1927-. This index is composed of 14 stocks. It is an arithmetic average weighted by the capital of the companies, with 1929 = 100. Source: *Statistical Year-Book of the League of Nations, 1936-37*, pp. 250-251; index published currently in *Monthly Bulletin of Statistics* of the League of Nations.

CZECHOSLOVAKIA, *National Bank*, Weekly and Monthly, 1927-38; Daily, 1935-38. The weekly index is composed of all industrial and transport shares quoted on the Prague Stock Exchange, 82 in number. It is an aggregative index with Jan. 3, 1927 = 100. The daily index is based on 10 important sensitive stocks. It is computed on the basis of a geometric average of daily variations. Source: correspondence; monthly index published formerly in *Monthly Bulletin of Statistics* of the League of Nations.

DENMARK, *Department of Statistics*, Monthly, 1914-. This index is composed of 21 stocks. It is an arithmetic average weighted by book capital of the companies, with 1914 = 100. It is intended to change the base to 1935 = 100. Source: correspondence; index from 1927, recomputed to base 1929 = 100, published currently in *Monthly Bulletin of Statistics* of the League of Nations.

FRANCE, *Statistique Générale de la France*, Annual, 1856-1919; Monthly, 1919-; Weekly, 1930-. Three indexes, for various periods, have been compiled. (1) 1856-1927; this is composed of 186 stocks, with 25 separate group indexes. Corrections are made as far as possible for changes in capital structure. The group indexes are arithmetic means of relatives, and the general index is arithmetic mean of group indexes, with 1901-10 = 100. (2) 1919-32, with annual figures back to 1913. This is composed of 288 stocks to July, 1929 and thereafter 300, with 20 separate group indexes. The indexes are arithmetic means of relatives,

COMMON-STOCK INDEXES

adjusted to represent a portfolio containing equal values of each security in 1925, with 1913 = 100. The general index is the mean of the individual relatives, similarly adjusted to 1925. (3) 1932-; this is based on 300 stocks in 22 groups with the same formula as No. 2, except that the indexes are first computed relative to the last day of December of the preceding year, and then reduced to the base 1913 = 100. Source: Marcel Lenoir, "Le mouvement des cours des valeurs mobilières français depuis 1856," *Bulletin de la Statistique Générale de la France*, Vol. 9, Oct., 1919, pp. 65-92; "Cours et revenu des valeurs mobilières en France de 1919 à 1927," *ibid.*, Vol. 17, 1927, pp. 390-405; "Cours des valeurs mobilières à revenu variable en France depuis 1927," *ibid.*, Vol. 22, Jan.-Mar., 1932, pp. 243-251; the industrial index, reduced to the base 1929 = 100, is published currently in *Monthly Bulletin of Statistics* of the League of Nations.

GERMANY, *Institut für Konjunkturforschung*, Monthly, 1926-. This index is composed of 213 stocks of mining and heavy industries and manufacturing industries, with separate indexes for the two groups. It is an arithmetic average weighted by the nominal capital (1 point in the weight for every RM. 50,000,000 of capital) of all German companies of each class on December 31, 1926. Another index of the general stock price level adds a group of commerce and trade (including railroads and public utilities) making a total of 329 stocks. Source: correspondence; index of 213 stocks, reduced to 1929 = 100, published currently in *Monthly Bulletin of Statistics* of the League of Nations; index of general stock price level on base 1924-26 = 100 published currently in *Wirtschaft und Statistik* and in *Wochenberichte* of the Institut für Konjunkturforschung; the same index on the base 1928 = 100 is published in the Institute's *Statistik des In- und Auslands*.

GREECE, *Conseil Supérieur Économique*, Monthly, 1928-. This index is composed of 7 stocks in chemical, tobacco, and mill industries. It is a geometric average of relatives, weighted by the value of transactions in 1928 and 1929, with 1929 = 100. Source: *Statistical Year-Book of the League of Nations, 1936-37*, pp. 250-51; index published currently in *Monthly Bulletin of Statistics* of the League of Nations.

HUNGARY, *Royal Hungarian Central Bureau of Statistics*, Monthly, 1927-. This index is composed of 18 stocks, those quoted on the Budapest Stock Exchange. It is an aggregative index, with 1929 = 100. Source: correspondence; index published currently in *Hungarian Statistical Review*, *Hungarian Statistical Year Book*, and *Statistical Quarterly Reports*, all issued by the Bureau, and in *Monthly Bulletin of Statistics* of the League of Nations.

ITALY, *Consiglio e Ufficio Provinciale dell'Economia Corporativa di Milano*, Weekly, 1925-. This index is composed of 33 stocks, those for which are published daily totals of transactions, and which represent over 1,000,000,000 lire subscribed capital. Indexes are also computed for 7 groups. All the indexes are arithmetic means, weighted by subscribed stock of the companies, with Dec., 1925 = 100. Source: *Consiglio e Ufficio Provinciale dell'Economia Corporativa di Milano, Indici Settimanali di Borsa*, Vol. 9, No. 44, Nov. 11, 1935, p. 1; index published currently in *ibid.*; an index of 74 stocks, compiled by Professor F. Guarneri, is published currently in *Monthly Bulletin of Statistics* of the League of Nations.

JAPAN, *Tokyo Stock Exchange*, Monthly, 1921-. This index is based on 181 stocks. Corrections are made for changes in capital structure. The index is computed by Irving Fisher's "ideal" formula, weighted by shares sold, with January,

UNITED STATES AND FOREIGN COMMON-STOCK INDEXES

1921 = 100. An index composed of 64 selected industrial stocks is also compiled, beginning in 1930, with Jan., 1930 = 100. Source: correspondence; the 64-stock index is published currently in *Monthly Bulletin of Statistics* of the League of Nations.

MEXICO, *National Bank*, Monthly, 1929-. This index is composed of industrial and mining stocks. It is weighted by outstanding capital, with 1929 = 100. Source: *Statistical Year-Book of the League of Nations, 1936-37*, pp. 250-51; index published currently in *Monthly Bulletin of Statistics* of the League of Nations.

NETHERLANDS, *Centraal Bureau voor de Statistiek*, Monthly, 1919-36. This index is composed of 100 stocks, selected from among different industries on the basis of paid-up capital and frequency of quotation. Group indexes are also published. Corrections are made for changes in capital structure. The index is an unweighted geometric mean. Source: correspondence; index was published in *Centraal Bureau voor de Statistiek, Maandschrift*.

NETHERLANDS, *Centraal Bureau voor de Statistiek*, Monthly, 1930-. This index, first computed in April, 1937, and carried back to January, 1930, the base year, is composed of 100 stocks. Separate indexes are given for production-goods (29 stocks) and consumption-goods (22 stocks) industries, and for industrials (the composite of 51 stocks). The index is an unweighted geometric mean. Corrections are made for changes in capital structure. Source: correspondence; index published currently in *Centraal Bureau voor de Statistiek, Maandschrift*; the industrial index is published currently in *Monthly Bulletin of Statistics* of the League of Nations.

NETHERLANDS, *Centraal Bureau voor de Statistiek*, Daily, June 15, 1937-. This index is composed of 10 active stocks. Corrections are made for changes in capital structure and for cash dividend payments. It is an unweighted arithmetic mean. Source: correspondence; index published daily in morning papers and weekly in *Bulletin of De Nederlandsche Conjunctuur*.

NORWAY, *Det Statistiske Centralbyrå*, Monthly, 1918-. These indexes are composed of all the stocks listed on the Oslo Stock Exchange, with certain hypotheses about the behavior of the prices of stocks not quoted; at the end of the year the index is revised from fuller information about stocks not quoted. The index is calculated upon paid-up value = 100. For the period 1918-30 the index was an unweighted arithmetic average. From July, 1929, it was recomputed as a geometric average weighted by shares outstanding. Source: correspondence; index is published currently in *Statistiske Meddelelser (Monthly Bulletin of Statistics)* published by the Central Bureau of Statistics, including separate indexes for manufacturing industry, shipping, whaling, banking, and insurance; index of market value of industrial shares, recalculated with 1929 = 100, is published currently in *Monthly Bulletin of Statistics* of the League of Nations.

POLAND, *Instytut Badania Konjunktur Gospodarczych I Cen*, Weekly, 1925-. This index is composed of 7 industrial stocks. Corrections are made for the influence of new stock issues, accruing dividends, and dividends pending from preceding year but still undistributed. The index is the ratio of the geometric mean of prices in the given period to that in the base year, 1928. Source: correspondence; index for last week of each month published currently in *Monthly Statistical Tables* of the Polish Institute for Economic Research, also in *Monthly Bulletin of Statistics* of the League of Nations.

SPAIN, *Banco de España*, Monthly, 1930-. This index is composed of 72 stocks,

COMMON-STOCK INDEXES

divided into 10 groups. The general index is a simple arithmetic average, with 1930 = 100. Source: correspondence; an index giving the average of the 5 most important industrial groups is published currently in *Monthly Bulletin of Statistics* of the League of Nations.

SWEDEN, *Affärsvärlden*, Weekly and Monthly, 1917-. This index is composed of 52 stocks, practically all those of any importance quoted on the Swedish Stock Exchange in 1924; there are 7 group indexes and a general index. This index begins in 1924, but a previous index began in 1917. Both indexes are corrected for all changes in capital structure and also for the influence of ordinary dividends. The indexes are arithmetic means weighted by the number of shares outstanding, with Dec. 31, 1924 = 100. Source: correspondence; monthly index published currently in *Monthly Bulletin of Statistics* of the League of Nations.

SWITZERLAND, *National Bank*, Monthly, 1927-. This index was originally composed of 99 stocks (at present, 88), with 10 group indexes. These represent 63 per cent of the number of Swiss stocks quoted on the principal exchanges and 93 per cent of their nominal total capital and include all Swiss companies with nominal capital of 5,000,000 francs or over. The index is computed as follows:

The market price of a stock, after deduction of the amount per share not yet paid in, is multiplied by the number of shares outstanding; the product is then divided by the paid-in capital. This result gives the ratio between the index and the nominal paid-in capital represented by 100. For example: the 1000-franc shares, with 250 francs paid in, of the Basler Rückversicherungsgesellschaft were quoted on November 22, 1936

Cash	Fr. 1500
Subtract amount not paid in	750
	750
So the share costs	750
× number of shares (3000)	2,250,000
÷ paid-in capital	750,000
= Index, 3 × 100	300

These ratios for individual stocks are averaged. Source: Herman Schneebeli, "Der Börsenindex der Schweizerischen Nationalbank," reprint from the *Neuen Zürcher Zeitung*, Nos. 235, 269, 280, Feb., 1927; index published currently in *Monatsbericht* of the bank; the industrial group index of 25 stocks is published currently in *Monthly Bulletin of Statistics* of the League of Nations, both in its original form and also reduced to 1929 = 100.

UNITED KINGDOM, *Actuaries' Investment Index*, Weekly and Monthly, Dec., 1928-. This index is composed of 177 stocks, with separate indexes for 17 groups; the list is reviewed annually and revised when deemed necessary. It is a geometric mean of relatives, with Dec., 1928 = 100. Source: K. C. Smith, "Description and Sources of Important Index-Numbers," London and Cambridge Economic Service, *Special Memorandum, No. 44*, June, 1936, p. 3; *Journal of the Institute of Actuaries*, Vol. 61, Part 2, No. 302, p. 379; selected indexes published currently in *Economist*.

UNITED KINGDOM, *Bankers' Magazine Index*, Monthly, 1922-. This index is composed of 387 representative stocks, with separate indexes for 34 groups. These indexes are aggregatives, weighted by shares outstanding, with Dec., 1921 = 100. Source: "Stock Exchange Values," *Bankers' Magazine*, Vol. 113, Feb., 1922, pp. 227-232; index published currently in *ibid*.

UNITED KINGDOM, *Financial News Index*, Daily, 1930-. This index is composed of 30 industrial stocks. It is a "geometric mean of changes in its 30 components"; base originally 1928 = 100; since July, 1935, July 1, 1935 = 100.

UNITED STATES AND FOREIGN COMMON-STOCK INDEXES

Source: K. C. Smith, "Description and Sources of Important Index-Numbers," London and Cambridge Economic Service, *Special Memorandum, No. 44*, June, 1936, pp. 3-4; index published currently in *Financial News* and *Economist*.

UNITED KINGDOM, *Financial Times Index*, Weekly, Monthly, 1927-. This index is composed of the most active stocks each week; separate indexes are given for 5 groups of stocks. The average percentage change is computed and corrected for upward bias due to selection of most active stocks; the index is calculated from the adjusted links, and chained to Oct. 15, 1926 = 100. Source: K. C. Smith, "Description and Sources of Important Index-Numbers," London and Cambridge Economic Service, *Special Memorandum, No. 44*, June, 1936, p. 3; *Financial Times*, Jan. 10, Sept. 15, 1927; index published currently in *Financial Times*.

UNITED KINGDOM, *Investors' Chronicle Indexes*, Monthly, 1923-. These include indexes of First Class Business (16 stocks), General Business (70 stocks), and Speculative (56 stocks). Each index is the unweighted "arithmetic average of the percentage changes in its component groups since December 31, 1923." Changes in capital structure affecting prices of the stocks are allowed for. Source: K. C. Smith, "Description and Sources of Important Index-Numbers," London and Cambridge Economic Service, *Special Memorandum, No. 44*, June, 1936, p. 4; index published currently in *Investors' Chronicle* on first Saturday of each month, and quoted in Bank of England's *Monthly Statistical Summary*.

UNITED KINGDOM, *Kitchin Index*, Monthly, 1919-30. This index is composed of 20 industrials. It is an unweighted arithmetic average of relatives with 1913 = 100. "Adjustments are made for splittings and for bonus shares if the latter exceed 20 per cent of nominal holdings; but no allowance is made for rights." Source: London and Cambridge Economic Service, *Bulletin and Supplement*, 1923-1930; and correspondence.

UNITED KINGDOM, *London and Cambridge Economic Service Index Numbers*, Monthly, 1867-1914. This index is composed of from 26 to 80 stocks, with separate indexes for 11 groups. Adjustments are made for changes in capital structure. The index is an unweighted arithmetic average of relatives, with middle of 1890 = 100. Source: K. C. Smith and G. F. Horne, "An Index Number of Securities, 1867-1914," London and Cambridge Economic Service, *Special Memorandum, No. 37*, June, 1934.

UNITED KINGDOM, *London and Cambridge Economic Service Index*, Monthly, 1925-30; Semi-monthly, 1931-. This index is composed of about 90 stocks, with separate indexes for 14 groups (group indexes not published after 1930). Adjustments are made for "changes in the nature of the security—for rights having an effect of 5 per cent or more, bonuses, amalgamations, etc." The group indexes are arithmetic means of percentage changes weighted by market value of shares in 1924; the total index is an arithmetic average of the group indexes, weighted according to the relative importance of net output of each industry in 1924. Source: A. L. Bowley, G. L. Schwartz, and K. C. Smith, "A New Index of Prices of Securities," London and Cambridge Economic Service, *Special Memorandum, No. 33*, January, 1931; index published currently in London and Cambridge Economic Service, *Bulletin and Supplement*.

APPENDIX II

COMMON STOCKS INCLUDED IN COWLES COMMISSION INDEXES

The following list contains every stock included, at any time, in the Cowles Commission indexes. Each issue is listed under the group and subgroup to which it pertains, and the periods during which each subgroup and each individual issue constitute a part of the indexes are shown. The four principal groups are arranged in the following order: All Stocks, Railroads, Utilities, and Industrials, each (except Railroads) followed by its subgroups. Within each group companies are arranged chronologically in the order of their appearance in the indexes, and alphabetically for those beginning in the same month.

The All Stock, Railroad, Utility, and Industrial indexes cover the entire period 1871-1938. The date following the title of each subgroup indicates the month in which an index for that subgroup is first reported in the tables. In two instances, a second date is shown following the title of a subgroup, indicating that on that date the subgroup made its last appearance. When the title of a subgroup is not followed by any date, this signifies that no index is presented for that subgroup.

The first date following the name of each individual stock is the date on which its price quotations were first incorporated in the indexes. Of course the issue does not become effective until the following period. A second date indicates disappearance — i.e., it is the date subsequent to which the issue in question is not effective. A third date signifies reappearance, and so on. Where the last date given is followed by a dash and a period, it indicates that the stock was still being carried in its appropriate group and subgroup indexes at the end of 1938, when this compilation went to press, while a period alone following the last date is evidence of permanent disappearance from the indexes. All dates are inclusive. The abbreviations for months are: Ja = January, Fe = February, Mr = March, Ap = April, My = May, Je = June, Jy = July, Au = August, Se = September, Oc = October, No = November, and De = December. Years are abbreviated by omitting the first two digits. Thus 91 = 1891.

The phrase "Not in Earnings indexes" following the name of a stock indicates that the issue so designated does not appear in Series R, E, P_{Ea} , and Y_{Ea} for the dates given. This is due to the inadequacy of price or earnings records.

An issue may appear from time to time in the All Stock, and Industrial, Rail, or Utility group indexes without appearing in any subgroup index. This is due to there being discontinuities in the quotations which would have resulted in unduly large gaps in a subgroup index had it been formed. For example, the Tobacco—Cigarette Manufacturers index does not appear until January, 1912, there being no quotations available on any stock in this subgroup between November, 1901 and January, 1912, although one of its constituent stocks had been in and out of the Industrial and All Stock indexes twice since October, 1892. The extent to which this occurs may be judged by comparing the date given beside the title of each subgroup with the date of first appearance of stocks in that subgroup.

On the other hand, in a few instances between 1918 and 1926 a stock is in-

COMMON STOCKS INCLUDED IN COWLES COMMISSION INDEXES

cluded in a subgroup index but does not appear in the more inclusive indexes of which that subgroup is nominally a part. For example, the Auto-Knitter Hosiery Company appears from March, 1923 to January, 1926 in the Apparel index, but is not included in the Standard Statistics Industrial or All Stock indexes for that period. This situation arises because certain of the Standard Statistics subgroup indexes beginning in 1926 were extended back toward 1918 by the Cowles Commission, and these subgroups, for the period of their extension, were not incorporated in the more inclusive indexes to which they pertain. In some cases this extension involved the use of stocks whose price quotations did not appear in the Standard Statistics All Stock index. In other cases quotations which formed a part of the Standard Statistics All Stock index were omitted from the subgroup indexes constructed by the Cowles Commission. These omissions are due to the fact that the indexes constructed by the Cowles Commission are based on all actual sales price quotations available for three or more consecutive months on the New York Stock Exchange, while occasionally the Standard Statistics indexes continue to use the last preceding sales price where gaps in quotations occur.

Two examples may help to clarify some of these explanations:

RETAIL TRADE—DEPARTMENT STORES (Oc09-.)

A. B. Clafin Co.—Jy97-Fe98, Jy98-Oc98, De98-Fe01, Oc01-Ja02. Not in Earnings indexes, 1897, 1902.

The above record means that the subgroup, Retail Trade—Department Stores, is presented in the indexes continuously since October, 1909, while quotations on the stock of the A. B. Clafin Company were available and were used (in the All Stock and Industrial indexes) from July, 1897 to February, 1898, from July, 1898 to October, 1898, from December, 1898 to February, 1901, and from October, 1901 to January, 1902. Since none of these dates falls within the period since October, 1909, the Clafin Company's common stock has never appeared in the subgroup index under which it is listed. The additional information is given that, due to the inadequacy of price or earnings records in those years, this stock does not appear in the Series R (Earnings-Price Ratios), E (Earnings), P_{Ea} (annual price averages of issues for which earnings reports are available), and Y_{Ea} (annual yields of issues for which earnings reports are available) for 1897 and 1902.

BUILDING EQUIPMENT AND SUPPLIES (Se16-.)

Otis Elevator Co.—Oc19-. Not in Earnings indexes, 1919. Not in Industrial and All Stock indexes, Oc19-De25.

This record signifies that the subgroup, Building Equipment and Supplies, is presented in the indexes continuously since September, 1916, while the price quotations of Otis Elevator Company's common stock have been a part of the subgroup index continuously since October, 1919. Due to inadequate price or earnings records this stock is not included in the indexes of Series E, R, P_{Ea} , and Y_{Ea} for 1919. Also, this stock does not appear in the Industrial and All Stock indexes between October, 1919 and December, 1925, because its presence in the Building Equipment subgroup during that period is the result of a Cowles Commission computation extending the subgroup back from January, 1926, at which date Standard Statistics begins to report an index for this subgroup, to December, 1917, the month prior to the first substitution of Standard Statistics indexes for corresponding Cowles Commission indexes. Since Building Equipment

COMMON-STOCK INDEXES

stocks other than Otis Elevator were quoted prior to January, 1918, this extension was continued back as far as the data permitted (September, 1916). For that part of the extension period for which the All Stock and Industrial indexes were computed by the Cowles Commission (September, 1916 to December, 1917), this subgroup is a part of the All Stock and Industrial indexes, but for the next 8 years (January, 1918 to December, 1925) the Standard Statistics Industrial and All Stock indexes were not adjusted to include the Building Equipment subgroup. Since the stock of Otis Elevator was not quoted until October, 1919, it therefore does not appear in the Industrial and All Stock indexes until January, 1926. Thus it is a part of its subgroup index more than six years before it begins to affect the All Stock and Industrial indexes.

ALL STOCKS (Ja71-.)

This index comprises every stock in all of the groups listed below with a few exceptions which are specifically noted.

RAILROADS (Ja71-.)

<p>Baltimore & Ohio—Ja71-.</p> <p>Boston & Albany—Ja71-De98.</p> <p>Boston & Maine—Ja71-Ja18. Not in Earnings indexes, 1918.</p> <p>Central Railroad of New Jersey—Ja71-De10. Not in Earnings indexes, 1883-85.</p> <p>Chicago & Alton—Ja71-Ja18. Not in Earnings indexes, 1918.</p> <p>Chicago, Burlington & Quincy—Ja71-De00.</p> <p>Chicago & Northwestern—Ja71-Ja18, Ja26-. Not in Earnings indexes, 1918.</p> <p>Chicago, Rock Island & Pacific—Ja71-De02, Ja15-.</p> <p>Cleveland, Columbus, Cincinnati & Indianapolis—Ja71-De89.</p> <p>Cleveland & Pittsburgh—Ja71-De71.</p> <p>Delaware & Hudson—Ja71-. Not in Earnings indexes, 1871, 1877-79.</p> <p>Delaware, Lackawanna & Western—Ja71-.</p> <p>Eastern (Massachusetts)—Ja71-De87.</p> <p>Hannibal & St. Joseph—Ja71-De81. Not in Earnings indexes, 1873-75.</p> <p>Illinois Central—Ja71-.</p> <p>Lake Shore & Michigan Southern—Ja71-De97.</p> <p>Lehigh Valley—Ja71-.</p> <p>Michigan Central—Ja71-De97.</p> <p>Milwaukee & St. Paul—Ja71-De73.</p> <p>New York Central & Hudson River—Ja71-De13.</p> <p>New York & Erie—Ja71-De78.</p> <p>New York & New Haven—Ja71-De72.</p> <p>North Pennsylvania—Ja71-De78.</p> <p>Northern Central—Ja71-De09.</p> <p>Northern (New Hampshire)—Ja71-De86.</p> <p>Ohio & Mississippi—Ja71-De92.</p> <p>Old Colony—Ja71-De90.</p> <p>Pennsylvania—Ja71-.</p> <p>Philadelphia & Reading—Ja71-De96.</p> <p>St. Louis, Alton & Terre Haute—Ja71-De71.</p> <p>Toledo, Wabash & Western—Ja71-De76.</p> <p>New York, New Haven & Hartford—Ja73-.</p> <p>Chicago, Milwaukee & St. Paul—Ja74-De27.</p> <p>St. Louis, Iron Mountain & Southern—Ja75-</p>	<p>De80.</p> <p>Atchison, Topeka & Santa Fe—Ja76-.</p> <p>Missouri, Kansas & Texas—Ja76-.</p> <p>Union Pacific—Ja76-.</p> <p>Wabash (Receipts)—Ja77-De79.</p> <p>Burlington, Cedar Rapids & Northern—Ja78-De86.</p> <p>Canada Southern—Ja79-De01.</p> <p>Chesapeake & Ohio—Ja79-.</p> <p>Louisville & Nashville—Ja79-.</p> <p>Mobile & Ohio—Ja79-De00.</p> <p>New York, Lake Erie & Western—Ja79-De95.</p> <p>Northern Pacific—Ja79-De00, Ja06-.</p> <p>Chicago, St. Paul, Minneapolis & Omaha—Ja80-De08.</p> <p>Flint & Pere Marquette—Ja80-De92.</p> <p>Nashville, Chattanooga & St. Louis—Ja80-De94. Not in Earnings indexes, 1880.</p> <p>New York, Ontario & Western—Ja80-Ja18. Not in Earnings indexes, 1918.</p> <p>Peoria, Decatur & Evansville—Ja80-De95.</p> <p>St. Louis, San Francisco—Ja80-De89, Ja97-De02, Ja12-. Not in Earnings indexes, 1880-82.</p> <p>St. Paul & Duluth—Ja80-De99.</p> <p>Texas & Pacific—Ja80-Ja18, Ja26-.</p> <p>Wabash, St. Louis & Pacific—Ja80-De89.</p> <p>Wisconsin Central—Ja80-Ja18. Not in Earnings indexes, 1918.</p> <p>Missouri Pacific—Ja81-.</p> <p>St. Paul, Minneapolis & Manitoba—Ja81-De89.</p> <p>Long Island—Ja82-De99.</p> <p>Minneapolis & St. Louis—Ja82-De14.</p> <p>Ohio Southern—Ja82-De92.</p> <p>Canadian Pacific—Ja83-.</p> <p>Chicago, St. Louis & Pittsburgh—Ja84-De90.</p> <p>New York, Susquehanna & Western—Ja84-De97.</p> <p>Oregon Short Line—Ja84-De89.</p> <p>Columbus, Hocking Valley & Toledo—Ja86-De98.</p> <p>Denver & Rio Grande—Ja86-Ja18. Not in Earnings indexes, 1918.</p> <p>Norfolk & Western—Ja86-.</p>
---	---

COMMON STOCKS INCLUDED IN COWLES COMMISSION INDEXES

<p>New York, Chicago & St. Louis—Ja88-. Cleveland, Cincinnati, Chicago & St. Louis— Ja90-De16. Great Northern, Pfd.—Ja90-. Oregon Short Line & Utah Northern—Ja90- De95. Southern Pacific—Ja90-. Wabash Railroad Company—Ja90-De16. Wheeling & Lake Erie—Ja90-Ja18. Not in Earnings indexes, 1918. Iowa Central—Ja91-De11. Pittsburgh, Cincinnati, Chicago & St. Louis— Ja91-De16. St. Louis, Southwestern—Ja92-Ja33. Not in Earnings indexes, 1926-33. Erie—Ja96-. Chicago, Great Western—Ja97-Ja18. Not in Earnings indexes, 1918. Reading Company—Ja97-. Duluth, South Shore & Atlantic—Ja99-De16.</p>	<p>Hocking Valley—Ja99-De06. Minneapolis, St. Paul & Sault Ste. Marie— Ja00-Ja18. Not in Earnings indexes, 1918. Kansas City Southern—Ja01-. - Colorado Coal & Iron Development Co.—No92—Ja97. Not in Earnings indexes, 1892, 1897.
- Interior Coal & Insurance Co.—Ja93—Se93. Not in Earnings indexes.
- Virginia Iron, Coal & Coke Co.—Ja03—De03, Au04—My10, Se10—My14, Fe15—Ja19, Mr19—Au23, Oc23—Ja24, Mr24—Ap25, Je25—Ja26. Not in Earnings indexes, 1903, 1914-15, 1926. Not in Industrial and All Stock indexes, Ja18—De25.
- Central Coal & Coke Co.—De04—Mr05. Not in Earnings indexes.
- Pittsburgh Coal Co.—My05—Fe09, Ap09—Ja26. Not in Earnings indexes, 1905, 1926. Not in Industrial and All Stock indexes, Ja18—De25. (See note below.)
- American Coal Products Co.—Je12—Mr13, Jy13—Oc13, De13—Jy14, Ja15—Au16. Not in Earnings indexes, 1912, 1914-16.
- Burns Brothers, Inc.—Oc15—Ja26. Not in Earnings indexes, 1915, 1926. (See note below.)
- Elk Horn Coal Corp., Inc.—My17—Ja19, Ap19—De25. Not in Earnings indexes, 1917. Not in Industrial and All Stock indexes, Ja18—De25.
- Pond Creek Coal Co.—Au17—Ja18, Ap18—Jy18, Se18—No18, Ja19—Fe19, Ap19—Mr23. Not in Earnings indexes, 1917-19, 1923. Not in Industrial and All Stock indexes, Ja18—Mr23.

—————

From 1926 to date this index comprises the stocks included under the two subgroup indexes, Coal—Anthracite, and Coal—Bituminous.

COAL—ANTHRACITE (Ja18-.)

- Burns Brothers, Inc., Class A—Ja18—De25. (See under Coal above.)
- Glen Alden Coal Co.—Ja26-. Not in Earnings indexes, 1926-29.
- Lehigh Coal & Navigation Co.—Ja26-.
- Lehigh Valley Coal Co.—Ja26-.
- Philadelphia & Reading Coal & Iron Co.—Ja26-.

COAL—BITUMINOUS (Ja18-.)

- Pittsburgh Coal Co.—Ja18-. (See under Coal above.)
- By-Products Coke Corp.—Ja26—De29. (See under Coal above.)
- Consolidation Coal Co., Inc.—Ja26—My33. (See under Coal above.) Not in Earnings indexes, 1933.
- Island Creek Coal Co.—Ja26-.
- Truax-Traer Coal Co.—Ja30-. Not in Earnings indexes, 1938.
- United Electric Coal Companies—Ja30-.

CONTAINERS (METAL AND GLASS) (Ja26-.)

- American Can Co.—Ja26-.
- Continental Can Co., Inc.—Ja26-.
- Owens-Illinois Glass Co.—Ja26-.
- Hazel Atlas Glass Co.—My33-.
- Anchor Hocking Glass Corp. (formerly Anchor Cap Corp.)—Ap35-.
- Crown Cork & Seal Co., Inc.—Ap35-.

—————

This index is not a part of the Industrial and All Stock indexes until January, 1935. However, some of its constituent stocks also appear in other subgroups from which they were withdrawn in January, 1935.

COPPER AND BRASS (Ja00-.)

- Anaconda Copper Mining Co.—Ja00-. Not in Earnings indexes, 1900-04.
- Amalgamated Copper Co.—No00—Au15. Not in Earnings indexes, 1900-01, 1915.
- Granby Consolidated Mining, Smelting & Power Co.—Ja07—Ja10, Ap10—My10, Ap15—Jy15, De15—Ja18. Not in Earnings indexes, 1907, 1910, 1915, 1918.
- Utah Copper Co.—Mr07—De25. Not in Earnings indexes, 1907.
- Balakala Consolidated Copper Co.—My07—Fe08. Not in Earnings indexes.
- Nevada Consolidated Copper Co.—My10—Se32. Not in Earnings indexes, 1910, 1932.
- Chino Copper Co.—Mr11—Fe24. Not in Earnings indexes, 1911, 1924.
- Ray Consolidated Copper Co.—Mr11—Mr26. Not in Earnings indexes, 1911, 1925-26.
- Miami Copper Co.—Ap11—De25, Ja35-. Not in Earnings indexes, 1911.
- Inspiration Consolidated Copper Co.—My12-. Not in Earnings indexes, 1912.
- Chile Copper Co.—No15—Ja30. Not in Earnings indexes, 1915, 1930.
- Greene Cananea Copper Co.—Oc15—Mr30. Not in Earnings indexes, 1915, 1930.
- Kennecott Copper Corp.—Fe16-. Not in Earnings indexes, 1916.
- Shattuck-Arizona Copper Co.—Fe16—De25. Not in Earnings indexes, 1916.
- Cerro de Pasco Copper Corp.—Fe17—De34. Not in Earnings indexes, 1917.
- Calumet & Arizona Mining Co.—Mr17—Ja18, Ja26—Ja32. Not in Earnings indexes, 1917-

COMMON-STOCK INDEXES

18, 1931-32.

Calumet & Hecla Consolidated Copper Co.—Ja26—.

Magma Copper Co.—Ja26—Au30, Ja35—. Not in

Earnings indexes, 1930.

Phelps-Dodge Corp.—Ap30—.

Noranda Mines, Ltd.—Se30—De34.

COTTON AND COTTON GOODS (Ja21—.)

Consolidated Textile Corp.—Ja21—Au38. Not in Textile, Industrial, and All Stock indexes, Ja21—De25. Not in Earnings indexes, 1938.

Amoskeag Manufacturing Co.—Ja26—Jy35. Not in Earnings indexes, 1935.

Cohn-Hall-Marx—Ja26—No29. Not in Earnings indexes, 1929.

Dartmouth Manufacturing Corp.—Ja26—Jy33. Not in Earnings indexes, 1933.

Nashawena Mills—Ja26—No35. Not in Earnings indexes, 1935.

Naumkeag Steam Cotton Co.—Ja26—Au30. Not in Earnings indexes, 1930.

Pacific Mills—Ja26—.

Wamsutta Mills—Ja26—.

Pepperell Manufacturing Co.—De27—. Not in Earnings indexes, 1938.

Apponaug Co.—Jy28—Fe30. Not in Earnings indexes, 1930.

West Point Manufacturing—Fe28—Au30. Not in Earnings indexes, 1930.

Cannon Mills, Inc.—No29—.

Dominion Textile Co., Ltd.—No29—. Not in Earnings indexes, 1938.

Powdrell & Alexander, Inc.—Fe30—Au30. Not in Earnings indexes.

United States Finishing Co.—Se30—My37.

DRUGS, MEDICINES, AND COSMETICS (No16—.)

United Drug Co.—No16—Jy18, Oc18—Ja26, Ja35—. Not in Earnings indexes, 1926. Not in Industrial and All Stock indexes, No16—Ja26.

American Druggists Syndicate—Ja19—Ja26. Not in Earnings indexes, 1919, 1926. Not in Industrial and All Stock indexes.

Vivadou, Inc.—My20—De25. Not in Earnings indexes, 1920. Not in Industrial and All Stock indexes.

Sterling Products, Inc.—My22—Ja26, Se33—. Not in Earnings indexes, 1922, 1926. Not in Industrial and All Stock indexes, My22—Ja26.

Household Products, Inc.—Mr23—Mr30. Not in Earnings indexes, 1923, 1930. Not in Industrial and All Stock indexes, Mr23—De25.

Coty, Inc.—Au25—. Not in Earnings indexes,

1925. Not in Industrial and All Stock indexes, Au25—De25.

Lehn & Fink Products Corp.—Oc25—. Not in Earnings indexes, 1925. Not in Industrial and All Stock indexes, Oc25—De25.

Parke, Davis & Co.—Ja26—.

Vick Chemical Co.—Ja26—Mr30, Se33. Not in Earnings indexes, 1930, 1938.

American Home Products Corp.—Fe26—.

Lambert Co.—Mr26—.

McKesson & Robbins, Inc.—Jc30—No38. Not in Earnings indexes, 1938.

Drug, Inc.—Ap30—Au33. Not in Earnings indexes, 1933.

Bristol Meyers Co.—Se33—.

Gillette Safety Razor Co.—My38—.

ELECTRICAL EQUIPMENT (Fe90—.)

Edison General Electric Co.—Fe90—My92. Not in Earnings indexes, 1890, 1892.

General Electric Co.—Je92—. Not in Earnings indexes, 1892.

Electric Storage Battery Co.—Fe05—Fe06, Se15—My17, Se17—De34. Not in Earnings indexes, 1905-06, 1915.

National Conduit & Cable Co.—Jc17—Ja18. Not in Earnings indexes.

Westinghouse Electric & Manufacturing Co.—Ja18—.

Electric Bond & Share Securities Corp.—Fe25—De25. Not in Earnings indexes.

General Cable Corp., Class A—Ja26—.

FERTILIZER (Fe01—.)

American Agricultural Chemical Co.—Fe01—My02, Jy02—Se02, De02—Je03, De03—Ap04, Jy04—Au04, Oc04—.

Virginia-Carolina Chemical Co.—Mr01—. Not in Earnings indexes, 1938.

International Agricultural Corp.—Oc12—Fe13,

Ap13—Je13, Ja14—Ap14, Je14—Jy14, Mr15—Ap15, Je15—. Not in Earnings indexes, 1912-15, 1938.

Davison Chemical Corp.—Ja26—Mr33. Not in Earnings indexes, 1932-33.

FOOD PRODUCTS—OTHER THAN MEATS (My98—.)

American Malting Co.—My98—Fe06, Ap06—My06, Jy06—Oc06, Mr17—Ja18. Not in Earnings indexes, 1906, 1917-18.

National Biscuit Co.—Au98—.

National Salt Co.—Se00—Ap02. Not in Earnings indexes, 1900, 1902.

Corn Products Co.—Mr02—Fe06. Not in Earnings indexes, 1902, 1906.

United Fruit Co.—Fe03—Jy03, Se03—De03, Fe04—Je04, Oc04—Fe05, No15—. Not in Earnings indexes, 1903, 1905, 1915.

COMMON STOCKS INCLUDED IN COWLES COMMISSION INDEXES

American Malting Company (Trust Certificates)—No05-De06. Not in Earnings indexes, 1905.

Corn Products Refining Co.—Mr06-. Not in Earnings indexes, 1906.

American Malt Corp.—Ap07-Au07, De07-Ja08, Mr08-Ap13, Je13-No13, Ja14-Mr17. Not in Earnings indexes, 1907, 1913-14, 1917.

Standard Milling Co.—Ja12-Se13, No13-Mr17, Jy17-Fe29. Not in Earnings indexes, 1912, 1929.

Loose-Wiles Biscuit Co.—Jy12-My16, Jy16-. Not in Earnings indexes, 1912.

Jewel Tea Co., Inc.—Mr16-Au17, Oc17-Ja18. Not in Earnings indexes, 1916, 1918.

Aeme Tea Co.—Je16-My17. Not in Earnings indexes.

California Packing Corp.—My17-. Not in Earnings indexes, 1917.

Booth Fisheries Corp.—Ja18-De25. Not in Earnings indexes, 1925.

Austin, Nichols & Co., Inc.—Au19-De25. Not in Earnings indexes, 1925.

Coca-Cola Co.—No19-De34. Not in Earnings indexes, 1919.

Beechnut Packing Co.—Ja26-.

Borden Co.—Ja26-.

Canada Dry Ginger Ale, Inc.—Ja26-De34.

Certo Corp.—Ja26-My29. Not in Earnings indexes, 1928-29.

Continental Baking Co., Class B—Ja26-.

Cushman's Sons, Inc.—Ja26-No28.

Fleischmann Co.—Ja26-Au29. Not in Earnings indexes, 1929.

General Baking Corp.—Ja26-.

General Food Products Co. (formerly Postum Co., Inc.)—Ja26-.

Kraft-Phenix Cheese Co.—Ja26-Ap30. Not in Earnings indexes, 1930.

National Dairy Products Corp.—Ja26-.

Melville Shoe Corp.—Se28-No30. Not in Earnings indexes, 1930. Also included in the Retail Trade index.

APPENDIX III

SERIES P_{Ea} INDEXES PRICES OF STOCKS FOR WHICH EARNINGS DATA ARE AVAILABLE

These are annual price indexes based on the stocks included in Series R and E. Since price indexes (which we may call P_{Ed}) had been computed, in another connection, for these issues for December of each year, the labor of computation of Series P_{Ea} was substantially reduced by assuming that the ratio of P_{Ea} to the annual average of P would equal the ratio of P_{Ed} to the Series P index number for the month of December.

Year	P_{Ea-1} All Stocks	P_{Ea-2} Industrials	P_{Ea-3} Railroads	P_{Ea-4} Utilities	P_{Ea-5} Coal	P_{Ea-6} Miscellaneous Services	P_{Ea-7} Shipping and Shipbuilding
1871	31.4
1872	32.9	22.9	71.3

APPENDIX IV

SERIES Y_{Ea} INDEXES

YIELDS OF STOCKS FOR WHICH EARNINGS DATA ARE AVAILABLE

This annual series represents the ratio of total dividend payments on stocks in the earnings indexes (Series R and E) to the average value of stock outstanding, for those same issues. Thus it is based on a less comprehensive list of stocks than is Y_a , but is directly comparable with R. Earnings records for recent years are substantially complete, and, where no Y_{Ea} figure is reported in the following pages, the corresponding entry for Series Y_a is to be employed, except as indicated in footnotes to the tables.

Year	Y_{Ea-1} All Stocks	Y_{Ea-2} Industrials	Y_{Ea-3} Railroads	Y_{Ea-4} Utilities	Y_{Ea-5} Coal	Y_{Ea-6} Miscellaneous Services	Y_{Ea-7} Shipping and Shipbuilding

SAME AS SERIES Y_a INDEXES

APPENDIX V

INDEX OF BOND INTEREST

Column 1, entitled "Index of Bond Prices," was constructed by using for each year the bonds included for that year in Frederick R. Macaulay's index of yields on high-grade long-term railroad bonds, published in *Some Theoretical Problems Suggested by the Movements of Interest Rates, Bond Yields and Stock Prices in the United States since 1856*, pages A5-A107. The link for each year is an arithmetic average of relatives representing the price movement of each bond from January of the year in question to January of the succeeding year. The index of bond prices is secured by "chaining" these links by product cumulation. Column 2, entitled "Current Yield," is an arithmetic average of the yields secured by dividing the price of each bond for January into the percentage representing its coupon rate. The "Index of Bond Interest" in column 3 is for each year the product of the corresponding figures from columns 1 and 2. It thus represents the number of dollars interest which would have been received for the year in question from an investment in dollars equal to the number representing the index of bond prices for that year. The series in column 3 is presented in column 4 after deflation by the New York Federal Reserve Bank Index of General Prices, the latter being adjusted to equal 100 in 1871. Thus, column 4 shows in dollars of constant purchasing power the history of fluctuations in "real" bond income. The Index of Bond Interest is presented in Chart 10, page 62, and, deflated, in Chart 11, page 63. It is discussed on pages 41 and 42 of the introduction.

Year	Index of bond prices	Current yield	Index of bond interest: (1)x(2)	Index of "real" bond income: (3) deflated	Year	Index of bond prices	Current yield	Index of bond interest: (1)x(2)	Index of "real" bond income: (3) deflated

* In 1937 the bonds used were the same as in 1936. In 1938 the Central Railroad of New Jersey General Mortgage 4's of 1935 was dropped.

GENERAL INDEX
TO INTRODUCTION AND APPENDIX I

GENERAL INDEX TO INTRODUCTION AND APPENDIX I

The word "index," as used below unless modified by some other phrase, refers to a common-stock index.

References in general apply to the Cowles Commission indexes unless otherwise noted.

- Actuaries' index, 452
- Affärsvärlden index, 35n, 452
- All Stocks index, 5, 7, 8, 41, 43, 46
- Annalist* indexes, 36, 437
- Associated Press indexes, 34-36, 437
- Austria, index, 448
- Automobiles and Trucks index, 7
- Average price per share,
 - adjustment for cash dividend, 18
 - adjustment for rights issue, 18
 - adjustment for stock dividend, 18
 - definition, 17-20
 - effect of scarcity of data on definition, 29
 - substitution of bid and asked prices for, 20
- Axe, Emerson Wirt, 437-438
- Axe-Houghton indexes, 35, 38-40, 437-438, 448

- Babson (Roger W.) index, 438
- Banco de España index, 451-452
- Bankers' Magazine* index, 452
- Barron's* indexes, 37, 438-439
- Berle, A. A., Jr., 1n
- Boettler (Herbert F.) index, 442
- Boston News Bureau index, 438-439
- Bowley, A. L., 453
- Brookmire index, 439
- Burgess (Charles P.) index, 439

- Canada, index, 35, 449
- Canadian Labour Gazette* index of wholesale commodity prices, 11
- Cash dividends, corrections for, 23-24
- Chemicals index, 7, 47
- Chile, index, 449
- Clement-Burgess index, 439
- Cleveland Trust Company indexes, 439-440
- Coal index, 31-32 (table)
- Cohenour, Vincent J., index, 440
- Cole (Arthur H.) and Frickey (Edwin) indexes, 440
- Commercial and Financial Chronicle*, 6
- Commodity price indexes, 11
- Common stocks,
 - average rate of increase in value, 40-41
 - compared with bonds, 2, 41-42
 - importance of, 1-2
 - in decedents' estates, 1
 - income from, 41-42
- Commons (John R.) and Stone (N. I.) index, 440
- Comprehensiveness of indexes, 5-7
- Conseil Supérieur Économique (Greece) index, 450
- Consiglio e Ufficio Provinciale dell'Economia Corporativa di Milano index, 450
- Construction of stock price indexes, 17-25
- Corrections for pecuniary changes, 20-25
- Corrections, more than one in a month, 25
- Cover (John H.) and others, index, 440
- Czechoslovakia, index, 449

- Data employed, 5-11
- Denmark, index, 449
- Dice, Charles Amos, 441, 445
- Disappearance of stocks, 8-10
- Dividends,
 - cash, corrections for, 23-24
 - paid in scrip, 25
 - stock, 15
 - treatment of extra, 15-16
- Dominion Bureau of Statistics (Canada) index, 449
- Dow-Jones indexes, 33-36, 38-40, 440-441, 448
- Dun's index of wholesale commodity prices, 11

- Earnings-price ratios, 42-46
 - compared with yields, 44 (table)
 - compared with yields and stock price action, 45-46 (table)
- Electrical Equipment index, 47
- Electrical World* index, 441
- England, *see* United Kingdom
- Ex-dividend date, 25

- Facts disclosed by the indexes, 40-50
- Federal Reserve Bank of New York index, 38-40, 441
- Federal Reserve Bank of New York index of general prices, 41-42
- Federal Reserve Bulletin* indexes of commodity prices, 11
- Fertilizer index, 47

COMMON-STOCK INDEXES

- Financial News* index, 452-453
Financial Times index, 453
Finanzpolitische Korrespondenz cost-of-living index, 11
 Fisher, Irving, 11, 30, 38, 442, 450
 index, 441
 Formula, Cowles Commission, 13, 24-25, 30
 compared with "ideal," 30-33
 corrections for cash dividend payments, 14-15
 corrections for issuance of rights, 13-14
 corrections for sale of stock, 13-14
 Formulas used in other indexes,
 aggregative, 11-12, 36, 37
 arithmetic average of relatives, 36
 chain-base, 12
 "ideal," 11-13, 30-33, 37-38, 441, 450
 Laspeyres', 11, 37
 France, index, 449-450
 Frickey (Edwin) indexes, 440-441, 445
- Gartley, H. M., 438
 Germany, index, 450
Göteborgs Handels- och Sjöfartstidning
